

SYLVANIA

MINI-LYNX AUTOMATIC

It's trained to go on and off duty without you being there

The new Mini-Lynx Automatic.

The new light-sensitive Mini-Lynx Automatic is an inspired innovation in energy saving lighting. Thanks to a built-in photocell, it will automatically come on at dusk, and also,

IT SWITCHES ITSELF ON WHEN IT'S DARK. OFF WHEN IT'S LIGHT.

automatically go off again at dawn. It's the most convenient form of security and reassurance-lighting available, making the electric time switch a thing of the past. Like all Mini-Lynx lamps, it is the result of extensive consumer research and fits virtually anywhere that conventional incandescent lamps would fit, but uses a fraction of the energy. And, because it reacts to light rather than time, it's only ever on when light's actually needed, so it cuts down on wasted energy too. As sure as night follows day,

Sylvania. A source of inspiration.

PUBLIC AREAS ARE AUTOMATICALLY ILLUMINATED WITHOUT THE NEED FOR MANUAL OPERATION, SO THE PUBLIC ARE NEVER KEPT IN THE DARK.

MINI-LYNX AUTOMATIC GIVES YOUR HOME A FRIENDLY REASSURING TOUCH, AS SOON AS DARKNESS FALLS.

MINI-LYNX AUTOMATIC WILL ENHANCE THE APPROACH TO YOUR HOUSE AND AUTOMATICALLY GIVE YOU A WARMER WELCOME HOME.

Mini-Lynx Automatic.

*under typical domestic switching cycle

The range of SYLVANIA MINI-LYNX AUTOMATIC lamps provide you with an energy saving lamp which lasts 12,000 hours but now also with the added feature of an integrated photocell device which turns the lamp on when the surrounding light drops below 50 lux† and off again when it rises above this level. This dawn to dusk safety and security light will give peace of mind all around the home whether you are in or out.

† 50 lux is a typical external lighting level measured at approximately 3pm on a mid winters day. The lamp is therefore ideal for exterior applications but it should be recognised that in certain interior applications the light level may not rise to a sufficient level to switch the MINI-LYNX AUTOMATIC off.

- Certain opalised enclosed fittings may cause the lamp to flicker.
- Switching levels may be affected by red sky conditions.

Mini-Lynx is not suitable for use with dimmers. Voltage/Frequency 220-240V/50Hz. Sylvania reserves the right to change data and specification without notice. Data for guidance only.
