GE imagination at work

ecomaginationSM

The future can seem pretty intimidating: Our known reserves of oil and natural gas are expected to be depleted by 2045, the climate is changing, and more than a billion people lack clean water. At GE, we believe some of the world's most pressing challenges present an opportunity to do what we do best: **imagine and build innovative solutions that benefit our customers and society at large.**

As a global leader in energy, technology, manufacturing, and infrastructure, GE is uniquely suited to help solve environmental challenges, today and for generations to come. Our customers want a more prosperous, cleaner future. By harnessing our most abundant renewable resource - the imagination of our people -we can create that future with them. We are taking a new approach to solving some of our customers' toughest environmental problems.

We call it ecomagination.

Our Heritage, Our Future

We believe that better technology is the answer to our customers' environmental challenges. And we are confident we can find tomorrow's solutions to those challenges just as we have since the days of our founder, Thomas Edison. Throughout our 128-year history, we have invented solutions to meet our customers' greatest needs. Over many years, we have developed one of the broadest ranges of environmentally advanced technologies. We will build on this legacy of success by researching and developing next-generation clean technologies. Our goal is to be a leader in bringing clean energy, air, and water and improved quality of life to all the world's citizens.

Introduction

This is GE... It begins with the best ideas in class and leads to quality products with proven demand, for which GE can offer long term services. We build client relationships with our customers to spark off ideas for new innovations

imagination at work

GE has always been a company that stands for progress. For more than 100 years we have been able to tell stories about GE innovations. GE's new imagination at work approach is about GE people, their curiosity, relentless drive, hard work and willingness to take risks – combined with a foundation of limitless imagination – that makes anything possible. It's a legacy of progress that began with our founder, Thomas Edison, and one that will continue through the 21st century. At GE, what we imagine, we can make happen.

As a Worldwide Partner of the Olympic Games, GE is the exclusive provider of a wide range of innovative products and services that are integral to a successful Games, starting with the 2006 Olympic Winter Games in Torino, Italy.

Introduction

Improved colour

Lamps that feature superior colour rendering are an art form. Quality of light is specific to GE lamps. Objects and colours actually appear more vivid and lively thanks to the extraordinary colour rendering feature of GE lamps.

CMH SuperMini – “halogen-like” light that provides dramatic accents and highlights with excellent colour rendering. Lamp to lamp colour conformity and consistent colour over life.

Halogen G9 Capsule – launched under the “TECH” brand as a sign of its high quality and performance – gives out a brighter, whiter light providing a high 2800K colour temperature. The new Capsule offers a constant light quality throughout its whole life.

AR111 Bright and white Halogen – excellent quality of light (up to 2950K) for decorative and architectural lighting.

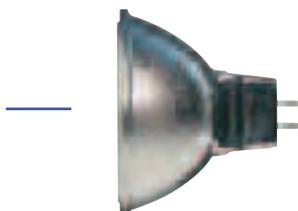

MR16 Mains – This compact mains voltage halogen lamp gives out excellent white light up to 2800K. With the aluminium coating this reflector lamp directs most of its heat to the front.

T5 Starcoat™ lamp – Starcoat™ is a proprietary coating technology that eliminates the need for traditional lower quality halophosphor coating by reflecting the UV-light more effectively. This leaves a pure triphosphor coating for excellent colour rendering and lumen maintenance performance.

Precise™ ConstantColor™ MR16 – features revolutionary GE Thin Film Coating Technology to ensure consistent colour throughout life.

Reduced energy

These lighting products conserve energy use and efficiency while improving the quality of light. Reduce your energy consumption whilst providing improved quality of light, lamp life, colour rendering and energy efficiency.

Genura™ lamps – save up to 80% on energy compared to standard incandescents. At 23W, Genura provides up to 80% energy savings compared to 100W R80 reflector lamps.

Biax™ Extra Mini Electronic Lamps – GE's Extra Mini uses around 20% of the electricity, versus ordinary light bulbs. Saving energy means saving money. And you're no sacrificing of light for lower watts.

Biax™ Plug-in Replaceable lamps – Through outstanding energy efficiency, a significant percentage of your annual electricity bill can be saved.

T5 Starcoat™ Linear Fluorescent System

High lumens in a small, lower wattage package makes GE Starcoat™ T5 the most efficient GE fluorescent lamp available. The new T5 system (lamp, ballast and luminaire) consumes up to 30% less energy when compared to T8 systems.

Lucalox™ XO

This type of High Pressure Sodium lamp provides 20% more light compared to standard Lucalox lamps.

Introduction

Longer life

Extended life means lower costs for lamp replacement and maintenance. GE lamps offer you long life coupled with all the advantages of quality lighting.

Precise™ ConstantColor™ MR16 – ensures outstanding long life-up to 6000 hours.

Biax™ Extra Mini – GE's Extra Mini lamps last about 15 times as long as an ordinary light bulb. Longer life means fewer burned out lamps to replace and reduced labour and maintenance costs.

Lucalox™ Superlife HPS lamp – 67% longer life than standard HPS-up to 55,000 hours. With continuous light after power interruption – standby feature.

CFL Biax Plug-in LongLast™ range – GE's enhanced line of plug-in products includes technical improvements to Biax™ lamps, where the lamp life has been increased by 66% to 20,000 hours

T5 Starcoat™ Linear Fluorescent HO & HE System – Efficiency and elegance couples in this lamp type achieving 30,000 hours with electronic ballast, making this lamp type extremely efficient in commercial and retail application in both direct and indirect luminaires.

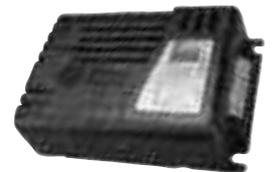

System solution

GE Lamps and Ballasts are the perfect combination for superior light output and long life. Energy savings, superior performance and quality light, are features of GE's new electronic ballast and lamp systems, which enables the creation of a new, environmental-friendly solution for both luminaire manufacturers and lighting designers.

CMH Electronic Ballasts - Coupling

ConstantColor™ CMH lamps with dedicated GE electronic ballasts will ensure further enhanced performance throughout a long lamp life. All CMH ballasts offered by GE are electronic, giving important advantages over conventional electromagnetic circuits.

CFL Electronic Ballasts - Multiwatt

electronic ballast operates best with GE's high output compact fluorescent lamps: the Biax™ Q/E 57W and 70W. A single ballast is suitable for both lamp wattages, enabling more flexibility in design and manufacturing.

GE incandescent lamps trace their ancestry to the world's first practical electric bulb, invented by Thomas Alva Edison, founder of General Electric Company, in 1879.

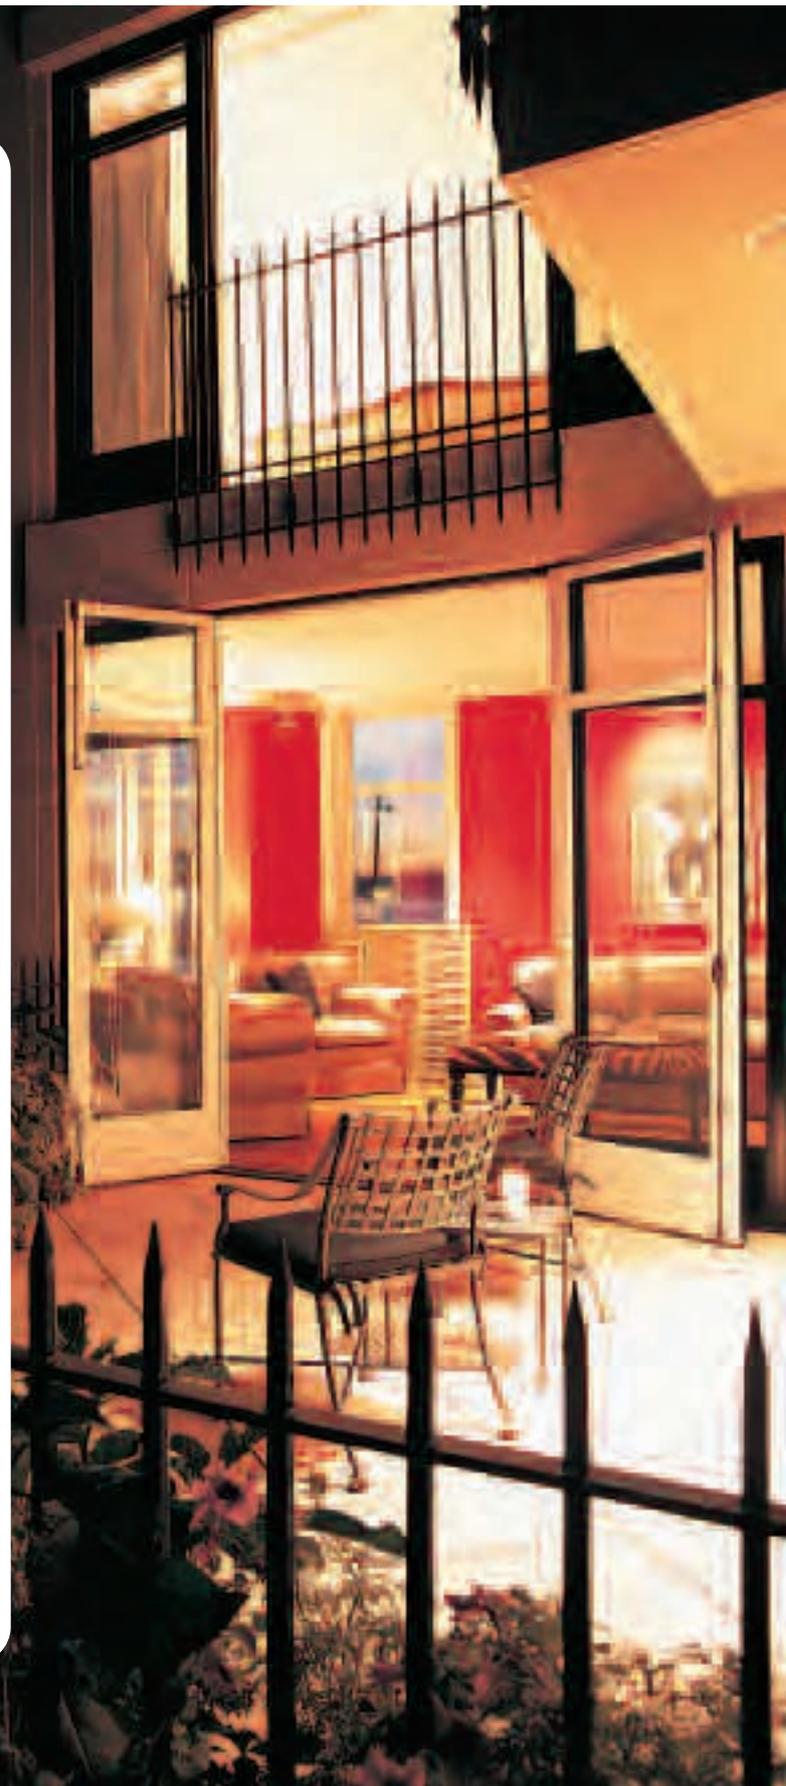

More than a century of research and development later, our current range of GE incandescent lamps represent state-of-the-art lamps for residential and commercial use, as well as special purpose lamps for decorative and display applications. Today's incandescent bulb houses a tungsten filament. When charged with electric current, the filament becomes white hot, and glows through a process called incandescence.

Incandescent lighting is the most prevalent form of lighting today due to its flexibility and cost. Incandescent lamps are commonly available in a large variety of size, shape, colour and wattage offering a wide range of application opportunities from home lighting to medical to industrial uses.

Incandescent lamps

Product identification

The following glossary of terms and descriptions can help you when checking incandescent lamp specifications and explains how to use the product codes when ordering products. Within each product line, lamps are divided into families – within families lamps are listed by wattage.

Watts:

Energy used. To find actual energy used (kWh) multiply power (watts shown) x hours of use divided by 1000

Product description:

Abbreviation of the lamps' main characteristics

Product Code:

It is important to use this code when ordering to ensure that you receive the exact product you require

Diameter:

Bulb diameter in mm

Lumens:

The lamp's rate output after the initial 2 hours of operation

Energy Efficiency Class:

Energy saving code

Reflector lamps

Infrared Reflector

GE Reflector is a lamp range constructed from blown glass bulbs with an interior mirror finish which directs light more efficiently to the required area or object to be illuminated.

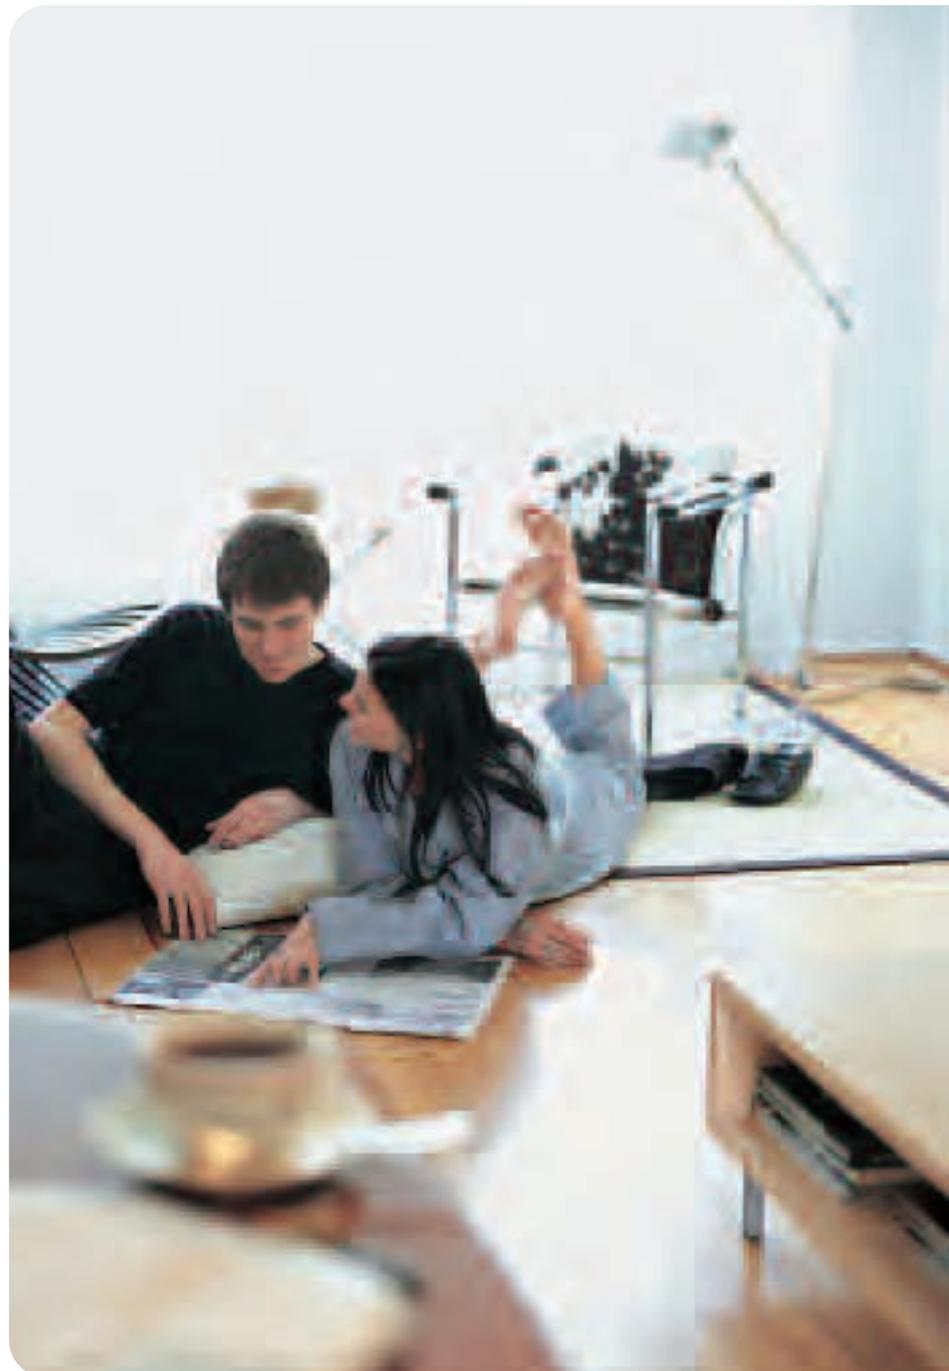

- Reflector R39-R95
- PAR Reflector lamps
- Enrich lamps
- Long life Reflector lamps
- Infralamps
- Coloured Reflector lamps (e.g. disco)

Infrared Reflector lamps

These Infrared Reflector lamps convert power into clean, simple and convenient sources of radiant heat. Typical applications range from livestock raising, to industrial drying processes where the control and uniformity of heat distribution is advantageous.

Spot Reflector

- Available in White Satin or in different colors (Disco)
- Sizes are: R39, R50, R63, R80, R95
- E14/E27/B22 caps available
- In 25W-30W-40W-60W-75W-100W types

Incandescent lamps

Incandescent lamps
for special application

Traffic Lights Lamp

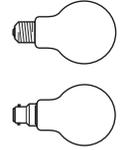

This incandescent lamp group features those products which are ideal for tough conditions in special areas of applications such as:

- Rough service
- Traffic lights
- Extra Low Volt lamps

Halogen lamps

GE invented and marketed the world's first halogen lamp in 1958.

Halogen lamps provide outstanding light quality – the crisp white light delivers superior colour reproduction.

They are more energy efficient than conventional incandescent lamps and offer a longer life – all within a compact size.

Other features include outstanding beam control, UV control, heat reflective coatings that protect display items and a unique 'twist and lock' cap which makes installation easy and safe.

Halogen lamps

Product identification

The following glossary of terms and descriptions can help you when checking halogen lamp specifications and explains how to use the product codes when ordering products. Within each product line, lamps are divided into families – within families, lamps are listed by wattage.

Watts: Energy used. To find actual energy used (kWh) multiply power (watts shown) x hours of use divided by 1000

Beam Spread Degrees: The angle of the cone of light produced by a reflector lamp at 50% of its intensity

Product Code: It is important to use this code when ordering to ensure that you receive the exact product you require

Volts: Each lamp's voltage is listed

Product Description: The lamp's identification code

Length: Expressed in mm

Pack Quantity: The number of lamps in one box

Precise™ MR16 ConstantColor™ – UV Control

| Watts | Volts | Product Description | Cap | Length | Diameter | Beam angle | Candela | CCT (K) | Life(h) | Pack Qty | EE Class | Product Code |
|--------------------------------|-------|---------------------|-------|--------|----------|------------|---------|---------|---------|----------|----------|--------------|
| ø 50 mm – open dichroic mirror | | | | | | | | | | | | |
| 75 | 12 | EYF/CC | GU5.3 | 46 | 50.7 | 15 | 11500 | 3050 | 4000 | 10 | - | 20843 |
| 75 | 12 | EYJ/CC | GU5.3 | 46 | 50.7 | 25 | 5500 | 3050 | 4000 | 10 | - | 20841 |
| 75 | 12 | EYC/CC | GU5.3 | 46 | 50.7 | 42 | 2000 | 3050 | 4000 | 10 | - | 20840 |

Lamp: Description of lamp type, and product features

Cap: The type of cap fitted

Peak Beam Candelas: Luminous intensity of the lamp beam expressed in candelas

Rated Average Life: The point in time when 50% of installed lamps are still burning

Energy Efficiency Class: Energy saving code

EYC/CC

ANSI – Code

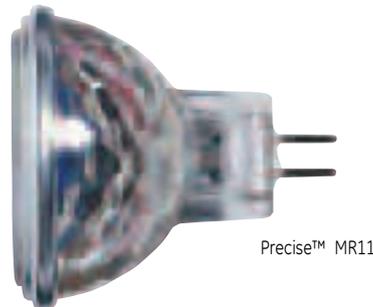

Product Feature, eg. Cover glass

CCT K: Colour temperature – Kelvin. The visual warmth or coolness of the light. The higher the number the whiter or cooler the light appears

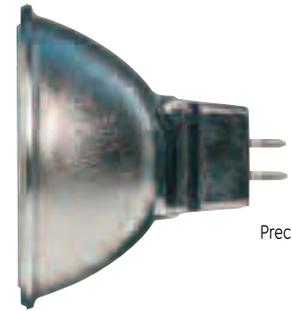

Precise™ MR16 & MR11

If you're looking for halogen, aim for a Precise™ solution

Precise™ MR11

Precise™ MR16

- **Cool, white light, precise beam** control, excellent colour performance and a lamp life of up to 6,000 hours.
- **Ideal for retail display lighting,** decorative lighting and spotlighting of individual features – including heat sensitive items.
- **Choose from a wide range of** beam angles and select Precise™ MR16 lamps for ultra – violet control.

Choose:

Precise™ ConstantColor™ MR16

for consistent light quality and exceptional long life.

Precise™ Bright MR16

for outstanding light output in a mid range lamp.

Precise™ Alutech™ MR16

for all your heat sensitive halogen fixtures.

Precise™ Bright MR11

for high output, light quality and long life in an extra compact form.

Range of beam angles

GE Precise™ MR16 lamps offer a choice of nominal beam angles from 8° to 60°. The range of beam angles can be used to either highlight single features with a tight focus to provide a wash of ambient lighting and a variety of effects achievable with intermediate beams.

8°angle

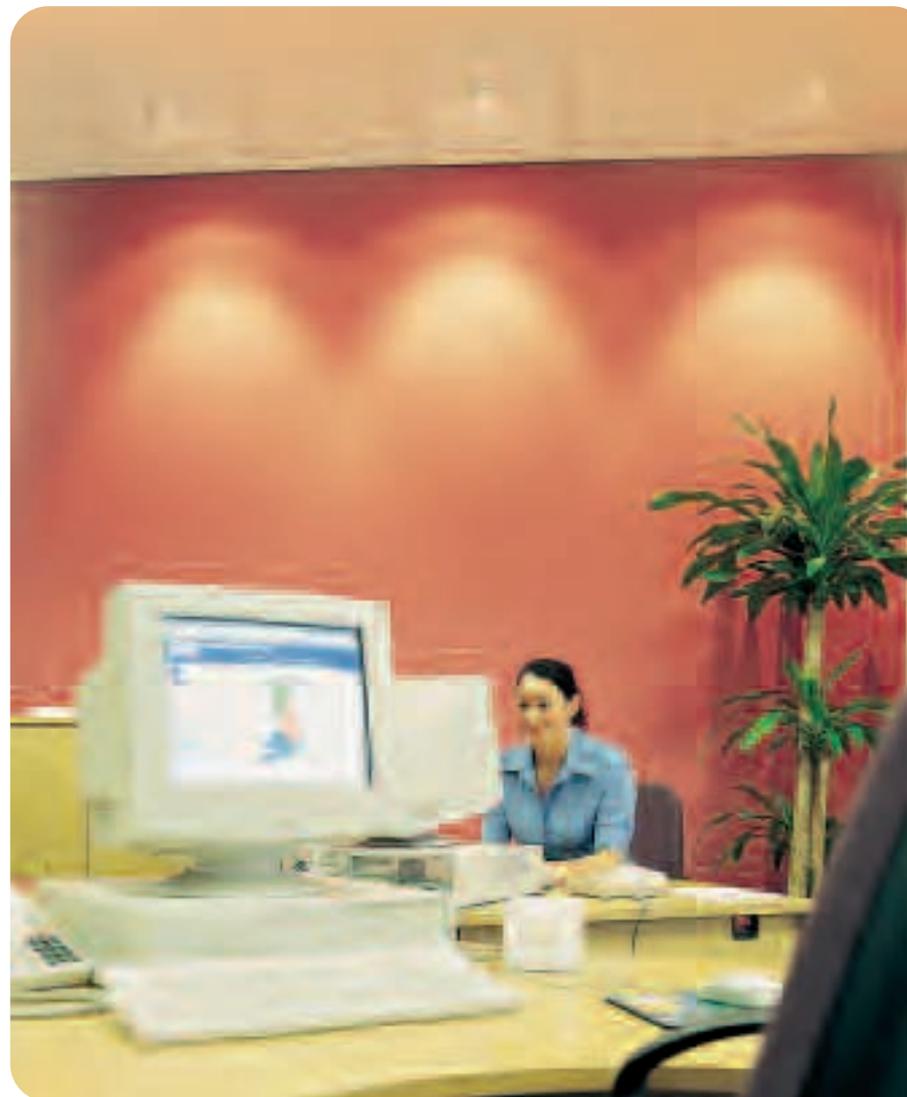

24°angle

36°angle

60°angle

Applications:

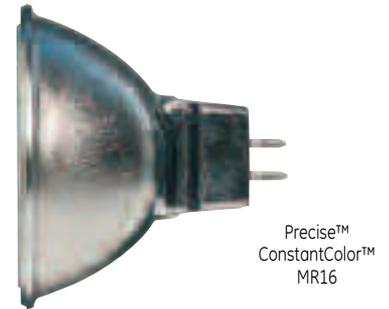

retail display lighting, decorative lighting and spotlighting of individual features.

Halogen lamps

Low voltage

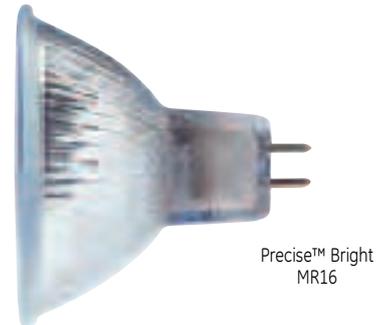

Precise™ ConstantColor™ MR16

A long lasting premium quality halogen lamp, the Precise™ ConstantColor™ lamp features revolutionary GE Thin Film Technology to give consistent light output for the 6000 hour life of the lamp. The advanced coating is designed to withstand temperatures of up to 500°C, making it the ideal choice for long-term reliability and consistent light quality.

Precise™ Bright MR16

Precise™ Bright sets new performance standards offering outstanding long life, outstanding light output and beam quality. Its advanced, computer-designed reflector gives a smooth beam and outstanding light output compared to similar lamps. Precise™ Bright is available in both open and closed forms.

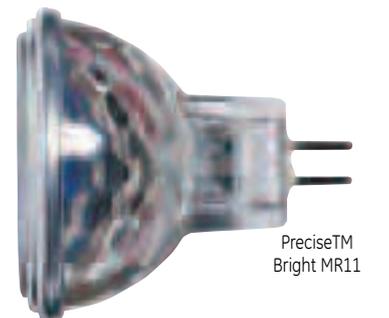

Precise™ Alutech™ MR16

The perfect choice for heat sensitive halogen fixtures. For many years finding a halogen lamp suitable for high technology electronic fixtures was a problem. Precise™ Alutech is the answer. With a GE developed aluminium coating, almost all of the heat is reflected away from the fixture. Throwing heat forward has advantages in downlighters like minimising heat build up in ceiling voids.

Precise™ Bright MR11

The extra compact, high performance halogen lamp GE Precise™ Bright MR11 packs the high output, light quality and long life of halogen into an extra compact form, making it ideal where space is at a premium.

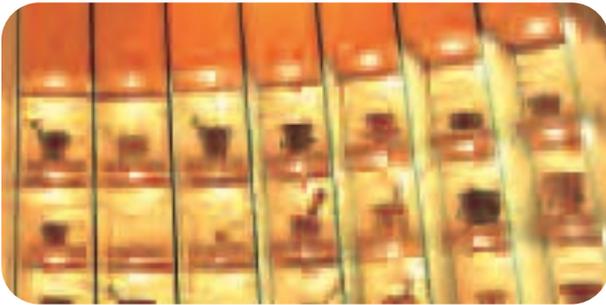

AR111

The GE AR111 Aluminium faceted reflector for a better beam control has been designed to direct light and heat forward to ensure full protection for the gear. AR111 provides bright and white halogen quality of light (up to 2950K) especially suitable for decorative and architectural lighting.

Halogen lamps Low voltage

- Up to 6000 hours life
- 98–99% Lumen maintenance
- Double sided dichroic coating
- With UV control
- The most consistent light output available

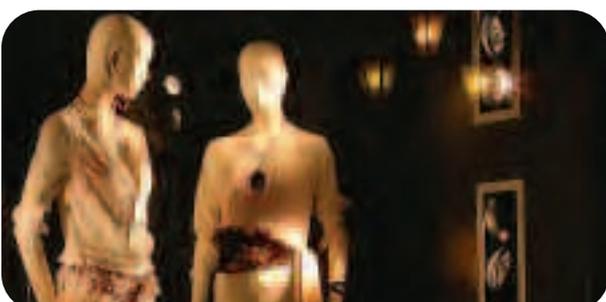

- Up to 4000 hours life
- Outstanding light output and beam quality
- Upgraded reflector
- UV control in both open and closed forms

- Heat reflected forward
- Ideal for heat sensitive fixtures
- 3000 hours life
- With UV control

- Extra-compact 35 mm size – perfect for lighting cabinet displays
- 3500 hours life
- Closed lamps with UV control

- Metal cap over filament to avoid direct glare effect and hot point
- UV-block to reduce bleaching effect
- Long life up to 3,000 hours
- 75%+ lumen maintenance to lower maintenance costs

Halogen lamps

Low voltage

Twist & Lock

Installing halogen?
GE's Twist & Lock makes it easy

TAL 50

- **Twist and Lock (TAL) system**
enables you to locate the lamp with one simple, fool-proof action.
- **The first low voltage halogen**
lamp designed for easy installation.
- **No more installation problems**
or poor connections caused by bent or broken connecting pins, so no more wasted lamps.

GE's Twist And Lock's tough mechanical bond and greater electrical contact between lamp and base means:

No retaining springs or rings to fit or release – offering faster lamp installation and replacement.
No risk of arcing – improving electrical reliability and safety.

TAL 50 lamps are 50 mm dichroic mirror lamps with ConstantColor™ coatings to give exceptional long life and consistent light quality.

3,500 hours life – up to 50% longer than standard dichroic lamps.

98% lumen maintenance producing near maximum light output even at 3,500 hours.

Consistent white light with no colour shift throughout the rated life of the lamp.

TAL 100 lamps are 100 mm reflector lamps designed for long life and extra high light intensity.

Up to 3,500 hours life Exceptional light intensity up to 17% higher than the nearest compatible lamp.

Applications: retail, displays, reception areas and residential interior lighting.

TAL downlighters welcome visitors to Timothy Guy Design's studio in Truro, UK.

AR 111 Reflector

Choose
GE Halogen
Reflectors

AR 111

Bright, white halogen quality light (up to 2950K) for decorative and architectural lighting

- Aluminium faceted reflector for a better beam control
- Metal cap over filament to avoid direct glare effects and hot point
- UV-block to reduce bleaching effect
- Long life (3 000 hours) and 75%+ lumen maintenance to lower maintenance costs

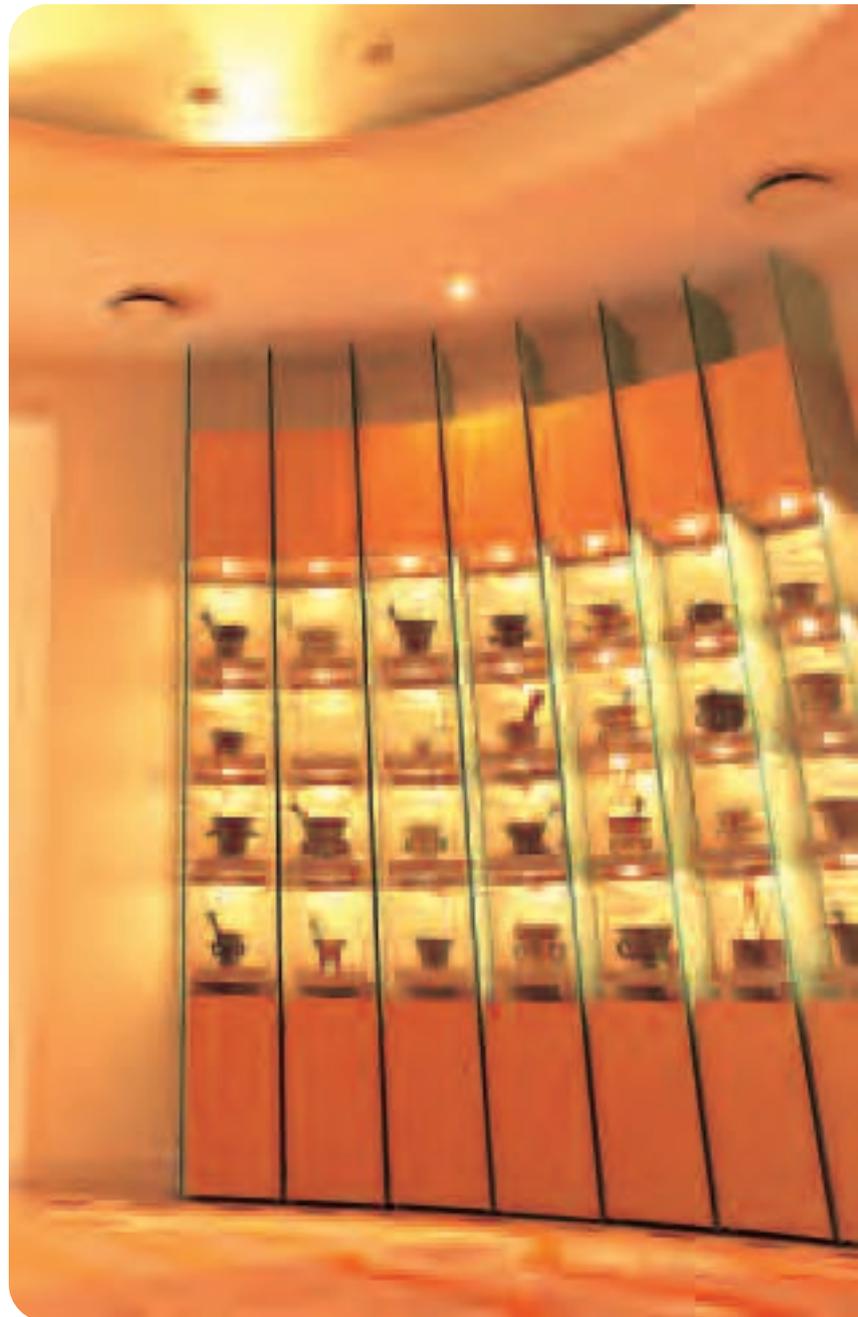

UV - Block

- Choice of nominal beam angles from 8° to 45°
- From 35 to 100 Watt
- 75% lumen maintenance
- 12 volts – Cap G53
- Dimmable

Suitable for a wide range of applications in display, accent lighting and general lighting in retail, museum and everywhere quality of light is essential.

The GE AR111 aluminium faceted reflector has been designed to

- direct light and heat forward to protect the gear (especially for electronic fixtures)
- be ideal to be used together with ConstantColor CMH™ 3000K to achieve the right lighting effect
- use G53 cap for easy retrofit of the lamps
- offer a slim shape to allow creative and compact design

Halogen lamps

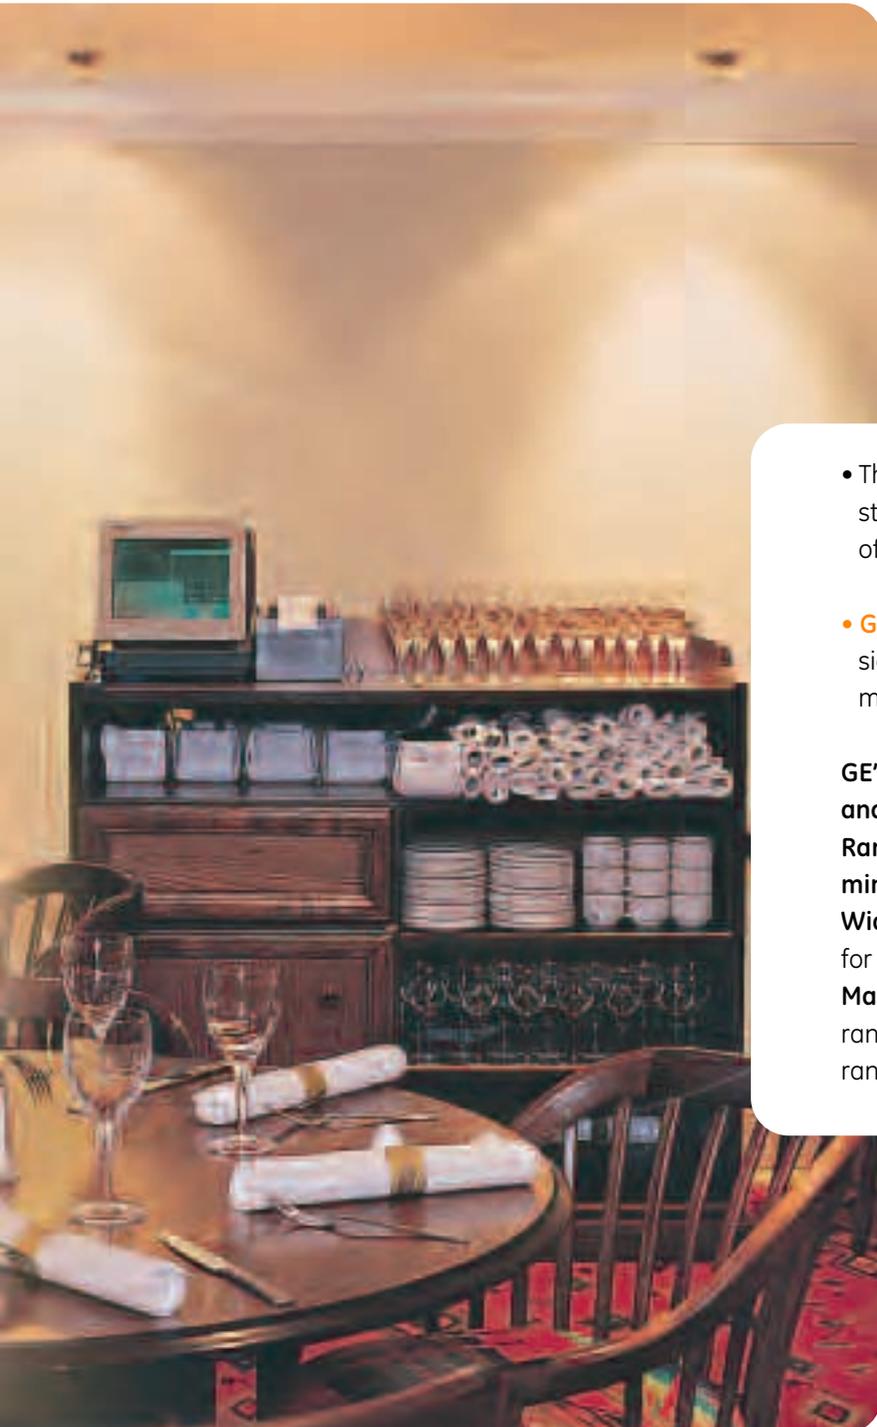

Low voltage

UV Control Capsules

All the power, quality and precision of halogen – with UV control

UV Control Capsules

- The ultra violet light emitted by standard halogen lamps can cause fading or bleaching of sensitive display items.
- **GE's UV Control Capsules** significantly reduce the effect of bleaching by minimising UV-B and UV-C radiation.

GE's UV Control Capsules give maximum light output and colour quality.

Range includes axial filament types for use in linear miniature reflectors and uplighters, providing:

Wide, smooth beam with accurate light cut-off – perfect for uniform lighting effects.

Maximum versatility – common light-centres across a range of wattages let you use one light fitting design for a range of applications.

Applications:
retail, display and task lighting.

Halogen lamps

Mains voltage

Mains voltage halogen reflector

lamp with aluminium coated reflector directs most of its heat to the front. With their distinct MR 16 look, the cool beam and aluminium lamps are the most compact lamps of their kind available. Because the lamp can be connected directly to the mains supply, the use of bulky and costly transformers is not necessary and offers benefits for both consumers as well as luminaire manufacturers.

- Small size
- High efficacy
- Excellent white light

Halogen lamps

Mains voltage

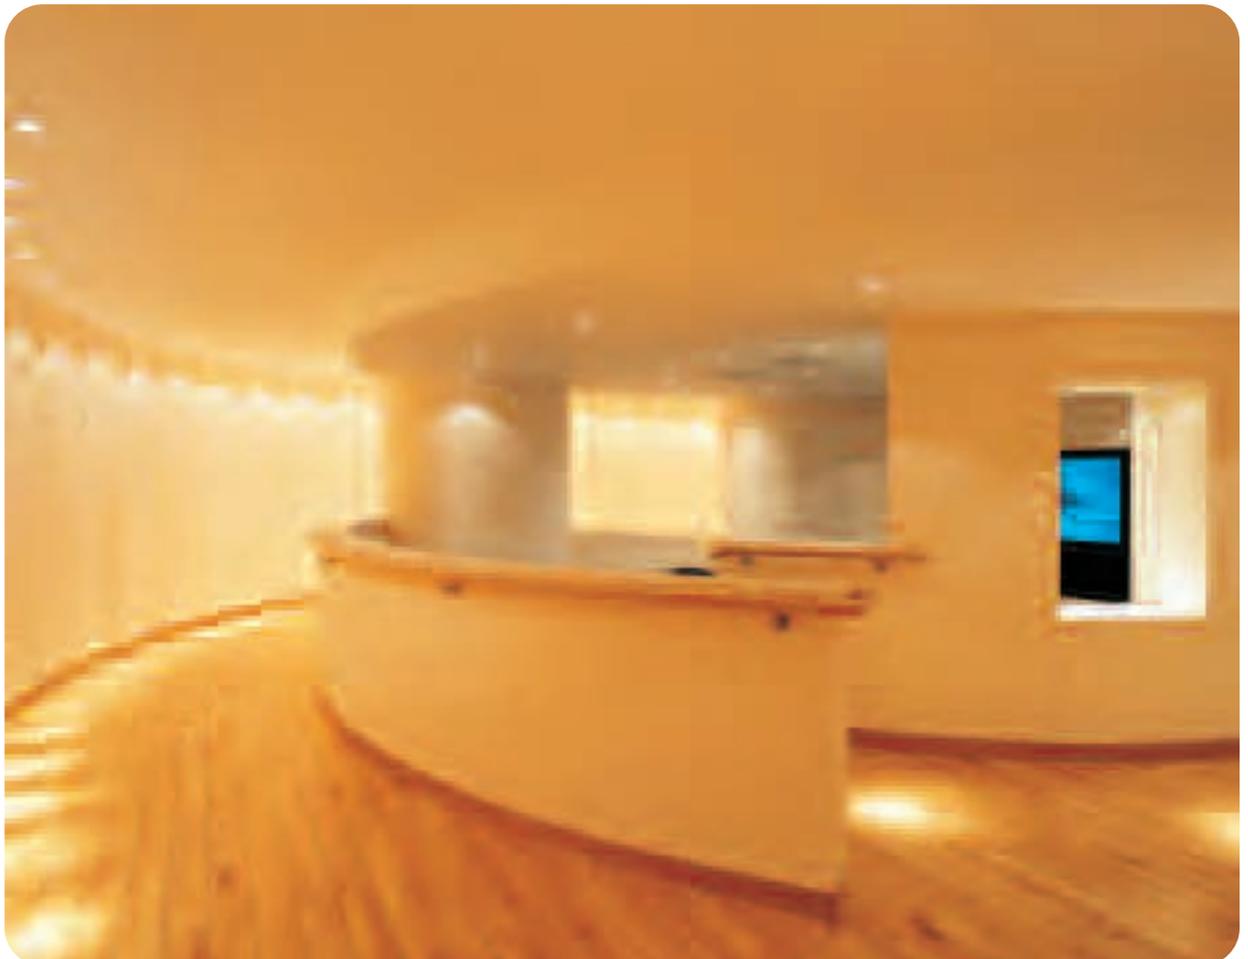

G9 capsule

is suitable for a wide variety of applications in display, accent lighting and general lighting where halogen light quality is essential with the ease of mains voltage where no transformer is required.

G9 capsule has been designed to

- operate on mains voltage, no transformer required
- offer a miniature halogen solution to allow creative and compact design of fittings
- be fully compatible with ConstantColor™ sCMH 3000 K lamps
- use G9 Cap for easy retrofit of the lamps used in open fixtures
- meet IEC standards IEC60357, IEC60432-2 and IEC60061-1 for performance, safety and base compliance.

HaloReflector, HaloCandle and Halolightbulb

HalogenReflectors provides
up to 20% more light

HalogenReflector

HaloCandle – Your chandeliers
will sparkle even more with
halogen light

HaloCandle

Halolightbulb – Upgrade the
quality of your light with a
traditional light bulb shape

Halolightbulb

New GE halogen lamps for the perfect atmosphere for home applications.

Haloreflector

- Flicker free light reduces eye strain
- R80, R63 R50 reflector bulb for all purposes
- 40W, 60W, 100W

HaloCandle

- Candle and twisted candle shapes enriches your home
- Clear candle to maximise light, frosted candle to reduce glare
- 40W, 60W

Halolightbulb

- Save energy, get more light with same power
- More compact (50 mm) standard light bulb shape
- 40W, 60W

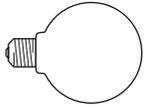

New halogen technology opens new dimension for home and retail lighting. On average creates 20% more light than a standard incandescent light bulb. A 60W HaloLight bulb is equivalent to a 72W incandescent lamp. Dimming makes it even more economical. A range of familiar shapes to fit most available fittings. In addition to this you can enjoy products of the Halogen family for 2000 hours in your home, 2 times longer than what you used to have.

Halogen lamps

Halogen lamps provide a compact, high output light source popular for accent, display and general lighting applications in a wide variety of commercial, industrial and residential environments.

Choosing the right lamp

To help you achieve the most effective spread and level of illumination for your particular application, use the performance cones shown in this catalogue.

Assessing performance cones

Performance cones show the area, strength and distribution of light produced by each lamp. This varies according to the level of illuminance produced by the lamp (lux), the height of the lamp above the object being illuminated, and the beam angle of the lamp selected.

Selecting power and beam

Comparing performance cones lets you select the correct lamp for your needs. For example, GE's most commonly used mirror lamp, the 50W EXZ Precise™ MR16 ConstantColor™ with a beam angle of 25°, would produce 700 lux at 2 metres high with a beam diameter of 0.9 metres.

If, however, you wanted a smaller beam diameter of say 0.4 metres, the 20W spot beam ESX with its narrower 12° beam angle would be more effective, producing 838 lux. This would provide 15% extra luminance with a 60% reduction in energy consumption.

Selecting beam angles

GE halogen lamps are offered in a range of beam angles from 8° to 60°. Choose small beam angles to highlight single features with a tight focus, wide beam angles to provide a wash of ambient lighting achieve a variety of effects with intermediate beams.

Figure 1

Choosing the right power and beam

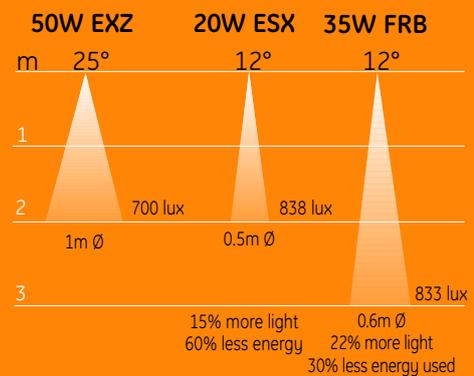

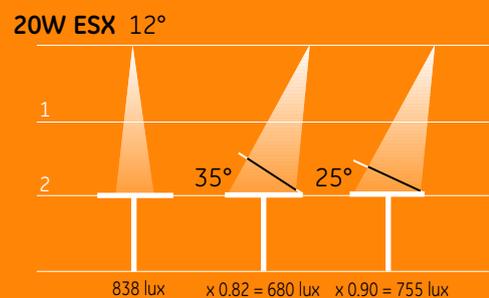

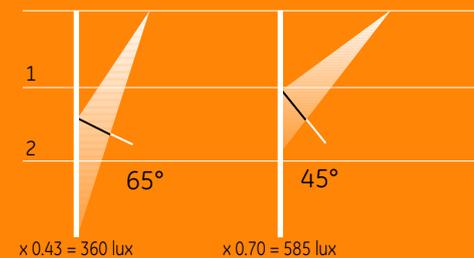

Figure 2

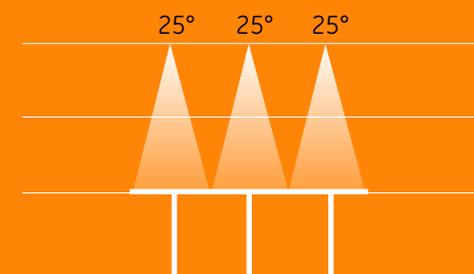

Choosing beam angles

20W ESX

3 x 50W EXZ lamps

Uniform performance

The performance cones can also provide a quick guide for achieving uniformity of illuminance on a horizontal plane

General information

Select UV control

Tungsten Halogen lamps emit some ultra violet rays similar to sunlight. Although the level of ultra violet emitted by halogen lamps is far lower – for example 8 hours in an office lit by halogen is equivalent to 10 minutes' sun eliminating these emissions is a sensible precaution. Choosing UV control halogen lamps effectively eliminates UV-C and greatly reduces UV-B radiation.

How to achieve maximum lamp performance

Most instances of early failure of halogen lamps are caused by incorrect installation. The risk of early failure will be reduced if you observe the following points:

- **Damage such** as bent pins and cracks in the base caused by rough handling during installation.
- **Poor electrical contact** between pins and lampholder which can lead to arcing. This is usually a result of insufficient insertion of the pins into the lamp holder.
- **Finger grease** on the quartz bulb which creates local hot spots and can lead to disintegration of the glass. Note this problem is avoided with sealed mirror reflectors or lamps with an integral outer glass envelope as the halogen bulb is protected from handling.
- **Over voltage** – running a lamp at higher than rated voltage for prolonged periods can substantially reduce life. For example, a 5% increase in rated lamp voltage can lead to a 50% reduction in lamp life. If problems occur the voltage should be checked at the lamp base and the rating of the transformer should be checked against the lamp load applied.
- **Overheating** is usually caused by insufficient ventilation or cooling of the lamp and can be the result of poorly designed installation. Overheating can be also caused by overvoltage, insertion of a dichroic reflector in closed fittings or usage of a higher wattage lamp than the fixture allows.
- **Open lamps** should only be used within a shield, except self-shielded tungsten halogen lamps.

Atmospheric factors

In harsh atmospheric conditions we would recommend ConstantColor™ which has a much more resilient coating plus the added advantage of 6000 hours. Humidity does not normally present a problem with dichroic lamps, however early lamp failure can occur in areas of high humidity such as in kitchens, bathrooms and swimming pools. In these applications, fittings should be chosen with a moisture resistance or IP rating, appropriate to the environmental conditions in which they will be used.

Fluorescent lamps

GE offers you the benefits of nearly 60 years' experience in the design and manufacture of fluorescent lamps.

Our comprehensive range of lamps continues to set new standards in light output, quality and efficiency and is available in a wide choice of lengths, wattages and colours.

Choose GE fluorescents for extra long lamp life, excellent lumen maintenance, improved colour performance and higher light output.

Product Description

Very warm, similar to incandescent light. Gives a warm effect in restaurants, hotels etc.
 Warm, gives a welcoming effect. Used in restaurants, hotels, offices and supermarkets.
 Intermediate colour, used in general, commercial and industrial lighting. Creates cool atmosphere in commercial installations. Recommended for hospitals. Intermediate colour between 840 and 860. Recommended for hospital and warmer climates.
 Very cool. Popular in warmer climates.

Very warm, similar to incandescent light. Gives a warm effect in restaurants, hotels etc.
 Warm, gives a welcoming effect. Used in restaurants, hotels, offices and supermarkets.
 Intermediate colour, used in general, commercial and industrial lighting.
 Creates cool atmosphere in commercial installations. Recommended for hospitals.
 Very cool. Popular in warmer climates.

Warm, gives a homely welcoming effect. Used in supermarkets, schools.
 Intermediate colour, used in general, commercial and industrial lighting.
 Creates cool atmosphere in commercial installations. Recommended for hospitals.

Warm, used in commercial or public buildings to create a "warm" atmosphere.
 Intermediate colour, standard colour for almost all applications.
 Cool, used in offices and shops. Higher colour rendering, but less efficient than cool white.
 Cool, used to create a cooler atmosphere in offices, factories and shops.
 Very cool. Popular in warmer climates.

Small amount of visible light with long wave UV-A radiation emitted to attract insects into insect traps.
 Only long wave UV produced. Used decoratively in discos as the UV makes white fabrics fluorescent.

Special Colours are available in some sizes, please ask our sales department for more information.

Fluorescent lamps

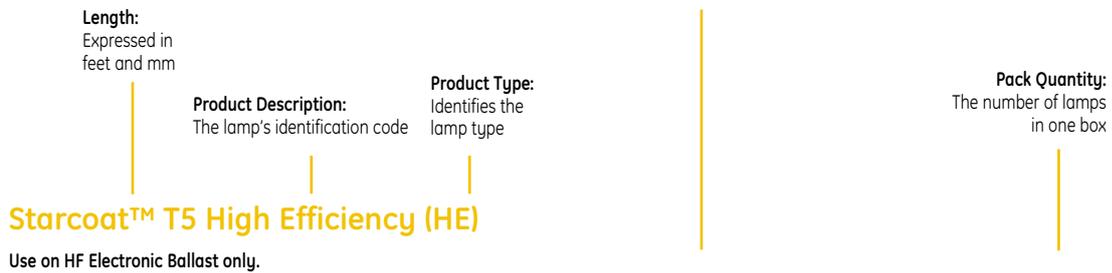

Product identification

The following glossary of terms and descriptions can help you when checking fluorescent lamp specifications and explains how to use the product codes when ordering products. Within each product line, lamps are divided into families - within families, lamps are listed by wattage.

Watts: Energy used. To find actual energy used (kWh) multiply power (watts shown) x hours of use divided by 1000

CRI Ra: Colour rendering index, the higher the number (1-100) the more natural the lit subject appears

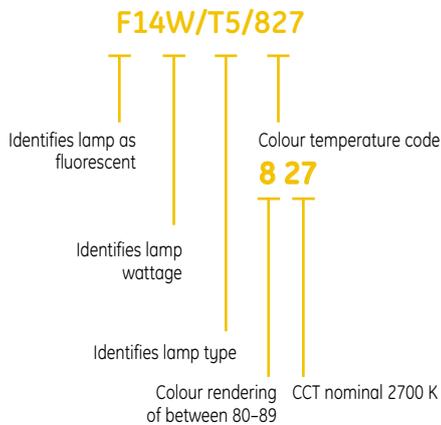

Product Code: It is important to use this code when ordering to ensure that you receive the exact product you require

| Watt | Length Ft | Length mm | Product Description | Product Type | CCT K | CRI Ra | Rated Average Life Hours | Initial lumens | Pack Qty | Product Code |
|--------------------|-----------|-----------|---------------------|------------------|-------|--------|--------------------------|----------------|----------|--------------|
| T5 (Ø 16mm - 5/8") | | | | | | | | | | |
| 14 | | 549 | F14W/T5/827 | STARCOAT/SL/1-30 | 2700 | 85 | 20000 | 1350 | 30 | 90230 |
| | | | F14W/T5/830 | STARCOAT/SL/1-30 | 3000 | 85 | 20000 | 1350 | 30 | 90239 |
| | | | F14W/T5/835 | STARCOAT/SL/1-30 | 3500 | 85 | 20000 | 1350 | 30 | 90246 |

Lamp: Lamp description followed by diameter (mm and inches)

Initial Lumens: Light output after the initial 100 hours of operation

Rated Average Life: The point in time when 50% of installed lamps are still burning

CCT K: Colour temperature - Kelvin. The visual warmth or coolness of the light. The higher the number the whiter or cooler the light appears

Lead free Starcoat T5 Efficiency with Elegance in Design

GE'S MOST efficient fluorescent SOLUTION... small size, big lumen output for visual comfort.

High lumen in a small, lower package enabling visual comfort and performance for more productive office and retail environments.

GE's most efficient fluorescent... small size, big lumen output

GE's smallest fluorescent lamp type, only 16mm in diameter, delivers the light of much larger wattage fluorescent systems. High lumens in a small, lower wattage package makes GE Starcoat™ T5 the most efficient GE fluorescent lamp available. And GE's exclusive proprietary Starcoat™ coating gives GE T5 lamps unrivalled colour rendering and lumen maintenance. A variety of linear fluorescent fixtures are available to take advantage of T5's unique features, offering unlimited design and application flexibility.

Fluorescent lamps

Efficiency

GE T5 Starcoat™ is small in size but offers you a variety of choices. With 9 wattages to choose from, you can either maximize your lumen output or your efficiency. If you would like to maximise your lm/W then we recommend you choose from our:

High Efficiency range

With this solution you can get up to 104 lumens per watt, this means ongoing cost savings. Combined with an extremely long service life, this range of lamps is ideally suited to commercial and retail application in both direct and combined direct/indirect luminaires. If you would like to maximise your output, then we recommend you choose from our:

High Output Lamps

With this solution you can get up to 7000 lumens this means improved system efficacy and reduced number of fittings. The extremely high surface illuminance of the High Output Starcoat™ T5 range makes these lamps ideal for indirect luminaires. These are the best suited to uplighting systems or direct lighting in high ceilings applications, such as those in canopies or industrial situations.

With elegance in design

Unlimited design flexibility

The 16mm diameter Starcoat™ T5 enables outstanding flexibility in luminaire design offering both elegance and improved efficiency

- Easy fitting of the T5 luminaires into the ceiling module system
- Smaller physical dimensions for improved light output control and smaller, more aesthetic fittings

Environmentally responsible design

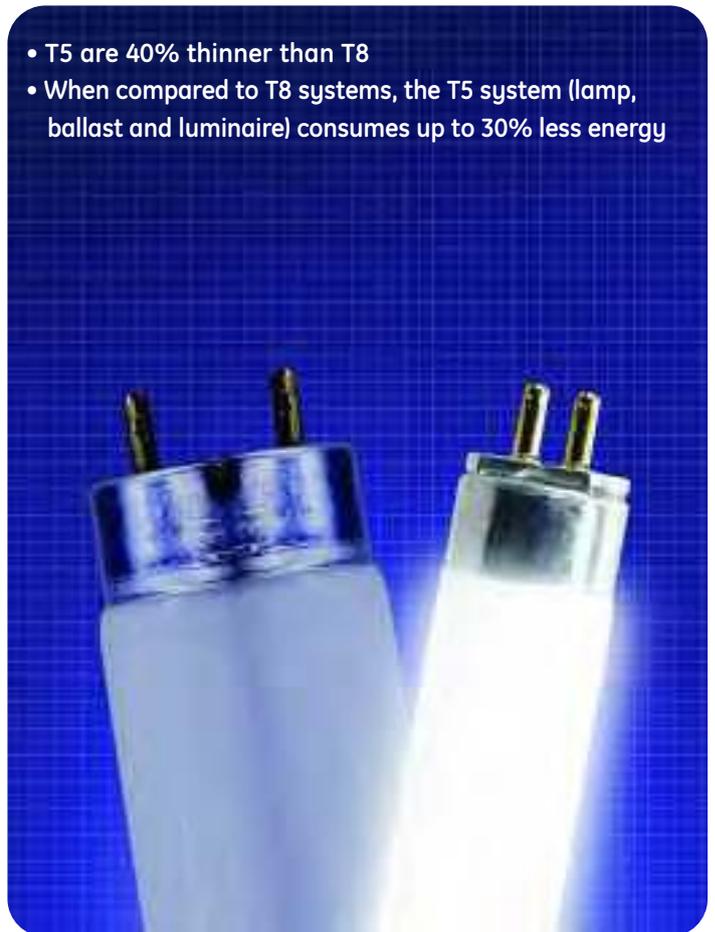

GE's T5 lamps feature 38% less glass and phosphors than T8 lamps and that means reduced waste in landfills. They are lead free products and contain only 5mg mercury, which is another plus for the environment. And with its high output design, you can reduce the number of lamps used for the same lumen output, further reducing environmental impact and providing added design flexibility.

All T5 lamps are environmentally friendly products – ROHS compliant & contains recyclable components.

Best colour coating technology

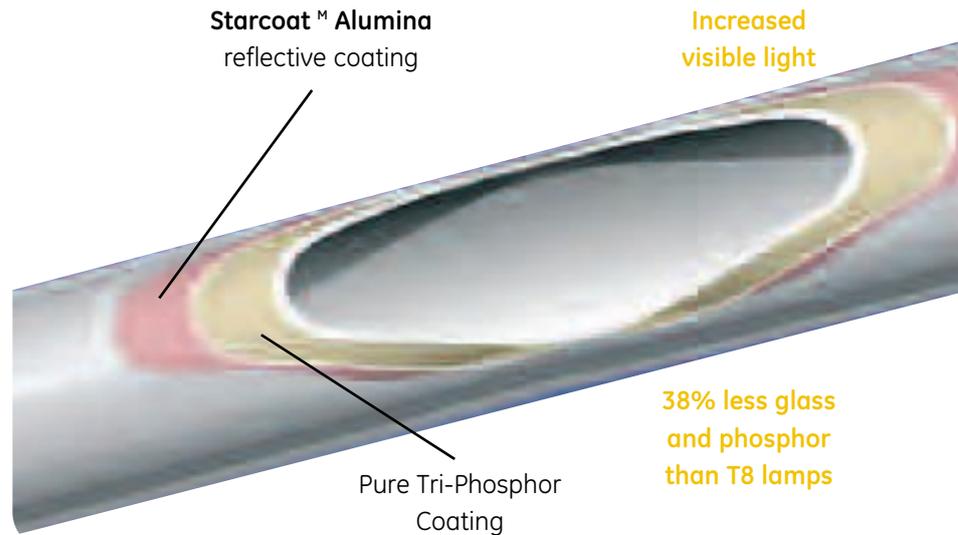

Our proprietary alumina pre-coat provides excellent CRI at 85 and 94% lumen maintenance at 40% rated life.

- T5 are 40% thinner than T8
- When compared to T8 systems, the T5 system (lamp, ballast and luminaire) consumes up to 30% less energy

Starcoat™ TECHNOLOGY

Starcoat™ is a proprietary coating technology that eliminates the need for traditional lower quality halophosphor coating by reflecting the UV-light more effectively. This leaves a pure triphosphor coating for excellent colour rendering and lumen maintenance performance.

Broad ballast compatibility

Rather than designing our lamps around one ballast, GE has maximised our performance on all major ballasts. GE Starcoat™ T5 is designed for HF operation which means: higher lamp efficacy and lower ballast losses than conventional ballasts.

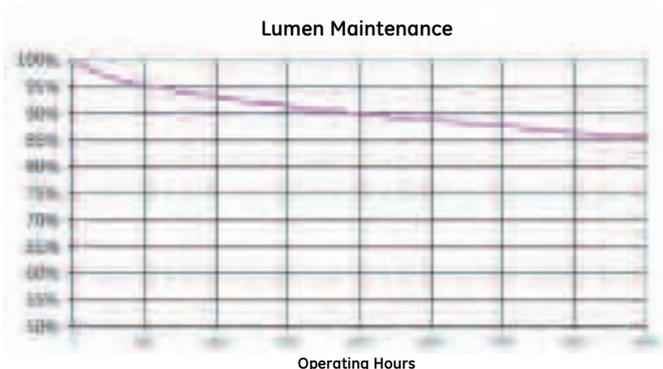

Wide range of commercial and industrial applications

- Perfectly suits Retail, Office, Schools, Commercial, Industrial, Sport halls
- Optimum light output reached at 35°C within fittings

Controlled performance specifications

- Rated average life-3hrs cycle
- Rated average life-12hrs cycle

Starcoat™ T5 High Efficiency (HE) lead free products

T5 Miniature Standard, Polylux™ and Specfill™ Lamps

T5 Miniature Lamps

T5 Miniature Lamps

T5 Miniature fluorescent lamps are designed for confined spaces of household and industrial applications. These lamps are widely used in different applications such as furniture cabinets, mobile homes as well as sign illumination. T5 Miniature lamps are well suited for use in maintained and non-maintained emergency modules and escape signs.

All T5 lamps are environmentally friendly products – ROHS compliant & contains recyclable components.

Fluorescent lamps

Polylux XLR™ Triphosphor fluorescent tubes Perfect light leads you right

Switch to Polylux XLR™ lamps for enhanced performance! Improved Polylux XLR™ for cost-efficiency, energy-saving and a better quality of light.

Good lighting brings you many benefits:

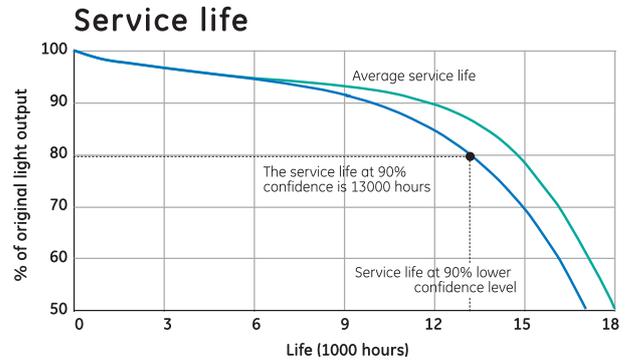

- Energy efficiency up to 93 lm/W
- Extra long life 20,000 hours*
- High performance, excellent colour rendering and superior lumen maintenance

Less lamps – more light

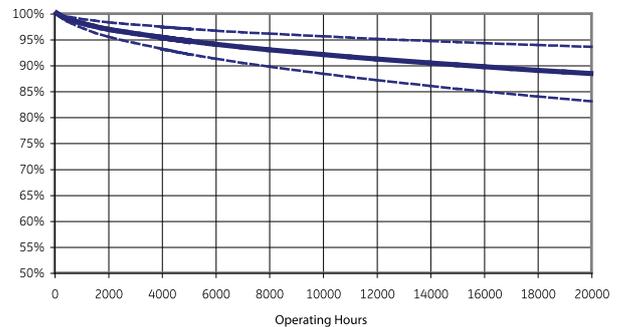

GE Polylux XLR™ lamps with excellent lumen output, energy efficiency up to 93lm/Watt:

- Superior service life 13,000 hours on 3 hours burning cycle! Excellent lumen maintenance and precise mercury dosing system push early failure level down to a minimum.
- Extended relamping cycles
- Increased performance reliability between relamping cycle
- Less waste over time – lamp disposal and packaging
- Up to 18% more light
- Fewer lamps are required to achieve the same illumination level

*15,000 hours life on conventional gear - Average rated life to 50% survival based on 3 hours switching cycle in accordance with International Standard IEC60082/EN60081

T8 Polylux XLR Lumen Maintenance

GE's environment conscious approach

For safer lamp disposal GE has invested heavily in reducing mercury content across all of its fluorescent lamp range:

- Mercury content is less than 5 mg
- Below any existing or proposed European legislation on dose level

All lamp components can be recycled at the end of life. Blue cap for easy identification of old and new lamps when replacing the old tubes into the Take Care System™ box.

All T5 lamps are environmentally friendly products – ROHS compliant & contains recyclable components.

Re-usable packaging means

GE's Take Care System™. No extra packaging requirements

- Less risk of pollution or injury due to breakage
- Easier handling and transportation for lamps to be recycled or disposed of

Colour choice

GE Polylux XLR™ is available in a comprehensive choice of colours from very warm light to very cool light, to create the desired ambience.

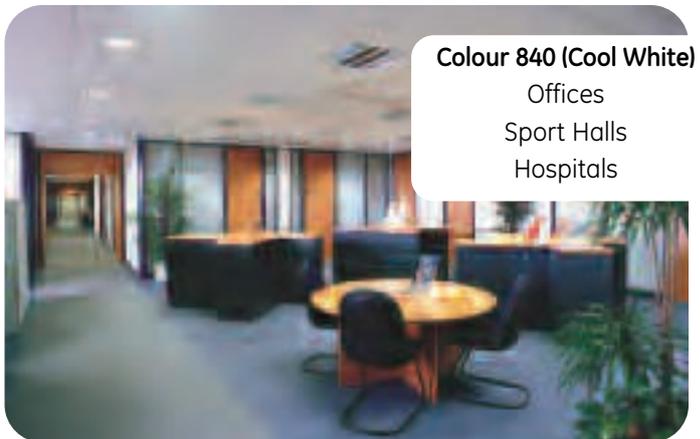

Colour 830 (Warm White)

- Retail
- Schools, gyms
- Reception Areas

Colour 860 (Daylight)

T8 Polylux™ XLR™ LongLast Range

Outstanding reliability with up to 42,000 hours life!

In today's business environment there is an increased need for lighting products that are helping to minimize operation costs and also providing environmentally responsible design.

GE's new T8 Polylux™ XLR™ LongLast range was designed to further improve reliability and drastically increase life performance without compromising on other key features of the product, such as initial lumen and lumen maintenance.

Benefits

- Very long and reliable product life – up to 42,000 hours
- Superior service life – up to 32,000 hours – ideal for group replacements
- Comprehensive product range – 36W, 58W and 70W
- Light output is same as for standard T8 Polylux™ XLR™ – best in class performance
- Excellent lumen maintenance
- Outstanding color rendering through the advanced XLR™ coating technology
- Environmentally friendly product – ROHS compliant & contains recyclable components
- Can be used on existing control gears and fixtures

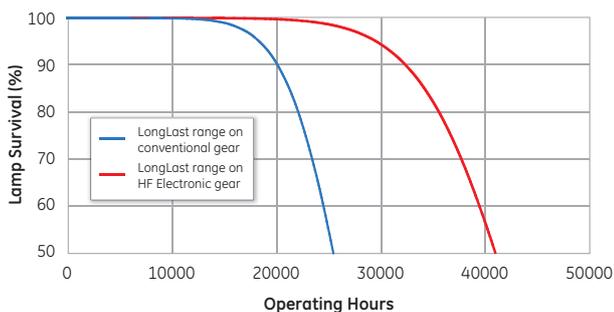

Application

GE Polylux™ T8 XLR™ LongLast range is an ideal choice for applications with high maintenance costs:

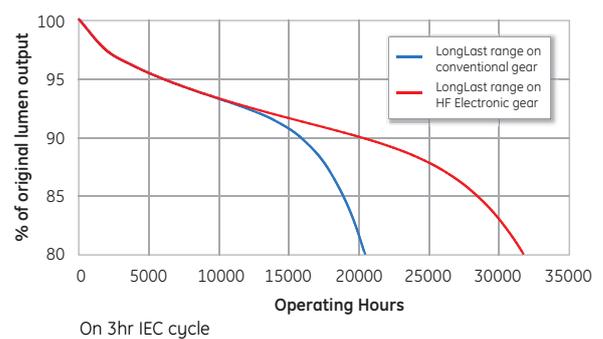

- Store lighting
- Warehouse lighting
- Industrial lighting
- Public buildings and areas

cause an incident

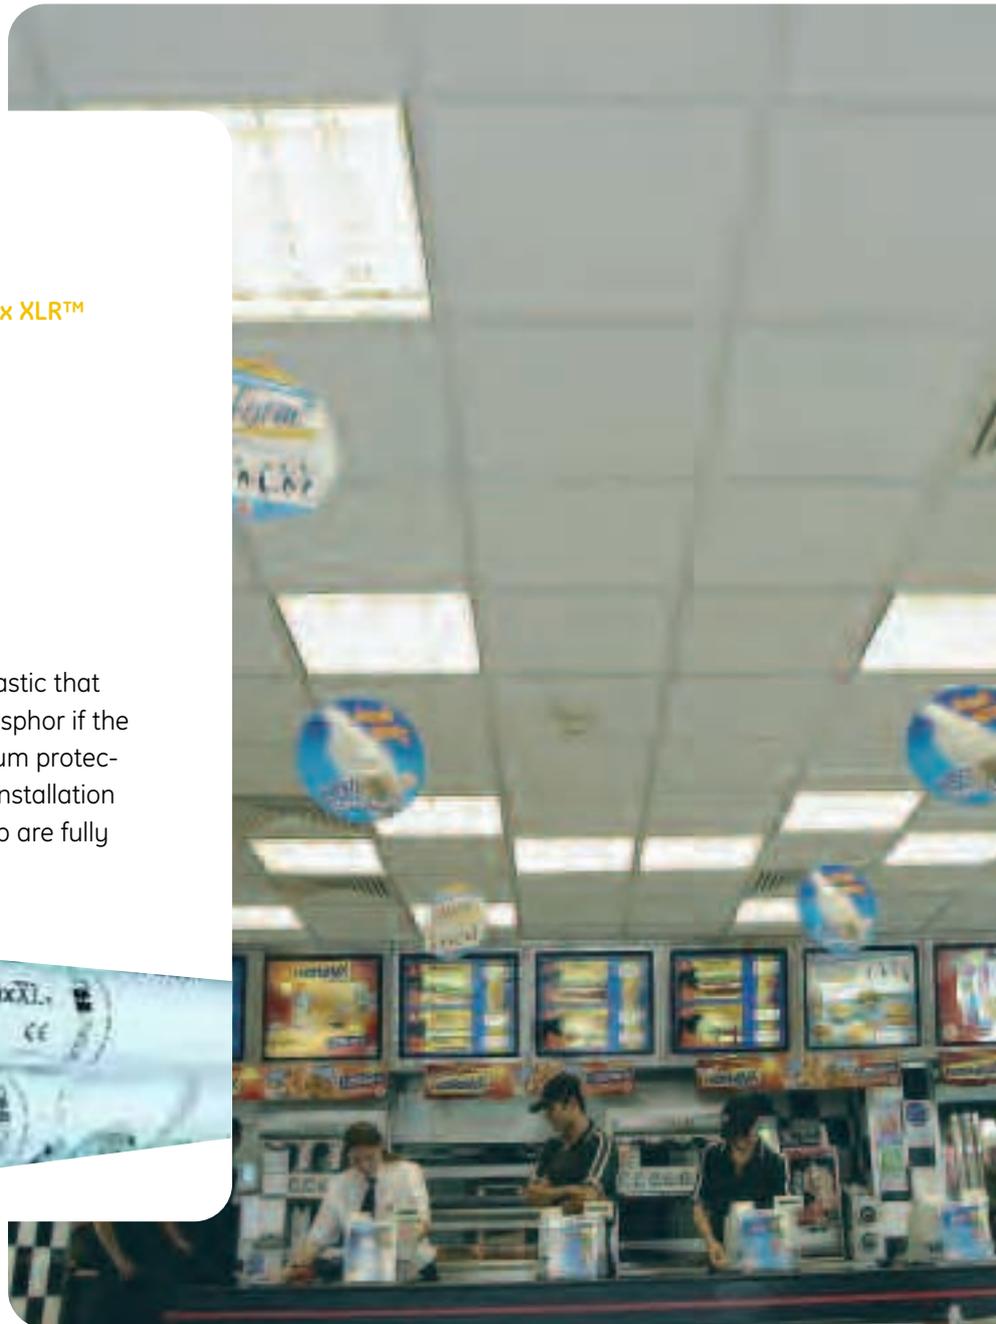

Cov-R-Guard™

- Complete shatter protection
- Quality protective sleeving
- Dependable UV- blocking
- Safety without sacrificing performance
- Cov-R-Guard™ lamps benefit from Polylux XLR™ triphosphor technology

- Long life
- Outstanding colour reproduction
- Excellent light output over life
- Reduced mercury content

Cov-R-Guard™ lamps

are wrapped in a casing of polycarbonate plastic that effectively contains glass fragments and phosphor if the lamp is broken. The casing allows for maximum protection with minimum light loss – keeping your installation bright and safe. Both the casing and the lamp are fully recyclable, once separated.

Applications:

food processing, hospitals, supermarkets, schools,
pharmaceutical, commercial kitchens, trains

Fluorescent lamps

Fluorescent lamps provide a much more dispersed light than 'point' sources such as incandescent, halogen or discharge lamps. This quality, along with their outstanding energy efficiency, make them ideally suited for lighting large open areas such as offices and industrial buildings.

Standard fluorescent lamps use halophosphate lamp coatings. These lamps are used where low initial cost is the most important factor. However, higher performance lamps using triphosphor coatings, such as GE's Polyflux XLR™ lamps, are now increasingly being used as they provide significant energy savings.

The effects of switching on+off

Frequent switching on+off of fluorescent lamps can reduce their operational life. The graph, Fig 1 below, shows the effect on a lamp's life of different switching cycles.

Although a lamp that is only switched on and off rarely will last longer, light output does fall in the latter stage of a lamp's life.

The effects of temperature change

Fluorescent lamps are designed to produce their optimum light output at an ambient temperature of 25°C. However, when installed in a lamp fitting, the temperature of the air surrounding a lamp can change and affect the light output of the lamp. The effects of changes in ambient temperature for a typical lamp are shown in the graph, Fig 2 below.

Using electronic ballasts

The efficiency of fluorescent lamps can be improved by increasing the frequency of the mains voltage supplied to them. Electronic ballasts and controls can be used to increase the normal mains frequency of 50/60Hz to 25/30KHz improving lamp efficiency by approximately 10%. Electronic ballasts also consume less power than conventional ballasts and when combined with other efficiency benefits, electronic ballasts can achieve power savings of around 20% compared to conventional 50/60Hz systems with the same light output levels.

Light-output data

The lumen output figures quoted are measured at 25°C in accordance with EN60081 and EN60901.

Caution notice

Handle and install all fluorescent lamps with care. Turn off power before installing lamps.

Fig 1 Effect on life of different switching cycles

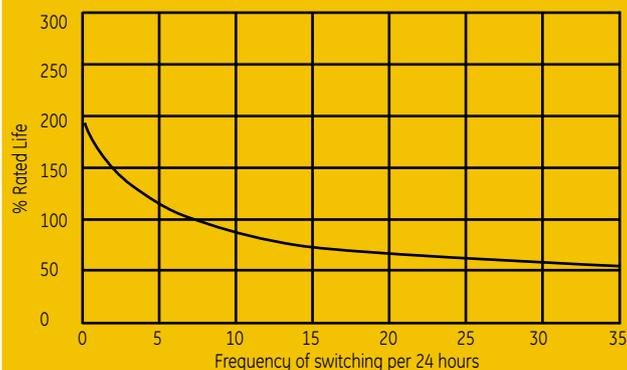

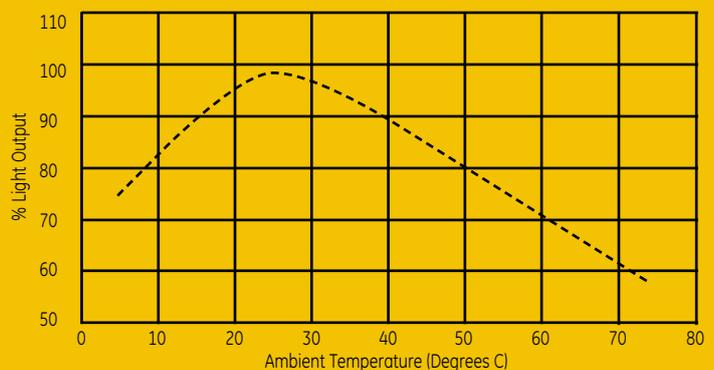

Fig 2 light output relative to ambient temperature

Compact fluorescent lamps

GE's compact fluorescent lamps give you more light and less heat, converting up to 25% of the electricity they use into light. Incandescent lamps convert just 5% into light and the remaining 95% into heat.

Because they use less energy you pay less for your lighting. They also last up to 15 times as long as incandescent lamps, so you spend less on maintenance.

While you save on cost with GE compact fluorescents, you lose nothing in quality. Colours are reproduced accurately and flicker-free light output is maintained for the whole of the lamp's life.

Compact fluorescent lamps

Product identification

The following glossary of terms and descriptions can help you when checking compact fluorescent lamp specifications and explains how to use the product codes when ordering products. Within each product line, lamps are divided into families - within families, lamps are listed by wattage.

Lamp:
Lamp description followed by base description

Length:
Expressed in feet and mm

CRI Ra:
Colour rendering index, the higher the number (1-100) the more natural the lit subject appears

Product Code:
It is important to use this code when ordering to ensure that you receive the exact product you require

Biax™ L – 4 pin

Product Description:
The lamp's identification code

Initial Lumens:
Light output after the initial 100 hours of operation

Pack Quantity:
The number of lamps in one box

| Watts | Length mm | Cap | Product Description | CCT K | CRI Ra | Initial lumens | Rated Average Life Hours | Pack Qty | EE Class | Product Code |
|-------|-----------|------|---------------------|-------|--------|----------------|--------------------------|----------|----------|--------------|
| 18 | 228 | 2G11 | F18BX/827 | 2700 | 82 | 1250 | 10000 | 25 | B | 30639 |
| | | | F18BX/830 | 3000 | 82 | 1250 | 10000 | 25 | B | 29223 |
| | | | F18BX/835 | 3500 | 82 | 1250 | 10000 | 25 | B | 30613 |
| | | | F18BX/840 | 4000 | 82 | 1250 | 10000 | 25 | B | 30614 |

Watts:
Energy used. To find actual energy used (kWh) multiply power (watts shown) x hours of use divided by 1000

Cap:
The type of cap fitted

CCT K:
Colour temperature - Kelvin. The visual warmth or coolness of the light. The higher the number the whiter or cooler the light appears

Energy Efficiency Class:
Energy saving code

F18/BX/840

Identifies lamp as fluorescent

Colour temperature code

Identifies lamp wattage

Identifies product type

Rated Average Life:
The point in time when 50% of installed lamps are still burning

GE Biax™ lamps offer up to 80% energy savings compared to equivalent incandescent lamps and last up to 10 times longer.

Biax™ L

- Stretched full length source with 4 pin base designed for 600mm square light fittings
- Replaces linear fluorescents twice the length
- Single-ended for simpler installation
- Round loop construction means no dark ends
- High surface brightness for improved optical control
- Polyflux phosphors allow matching with other fluorescents

Biax™ L

Biax™ S & S/E

- Biax™ S with 2 pin base and extra compact design to suit reduced size fittings
- Biax™ S/E with 4 pin base and external starter/controls for use with electronic control gear and dimming and emergency lighting applications
- 5 times more efficient than GLS lamps
- 9 times less maintenance compared to GLS lamps
- High colour rendering – matching the colour temperatures of incandescents

Biax™ S & S/E

Biax™ D & D/E

- 2 pin or 4 pin formats
- Light quality and colour performance to match other fluorescent
- High colour reproduction performance, providing rich, vibrant colours
- Wide range of wattages to suit all applications

Biax™ D & D/E

Biax™ T & T/E

- High colour reproduction performance, providing rich, vibrant colours
- Consistent high light output, irrespective of ambient temperature and the angle of installation
- Slim 49mm hexagonal base

Biax™ T & T/E

Biax™ Q/E

- High Lumen output with compact fluorescent and amalgam technology: 4200/5200 lm.
- Small size – 8 legged
- HF ballast operation
- Instant on quick warm up, hot restrike
- Wide colour range
- Low cost white light solution

Biax™ Q/E

Compact fluorescent lamps

Biax™ – Plug-In

Biax™ L – 4 pin External Starter Required

New CFL Biax™ Plug-in LongLast Range

Outstanding reliability with 20,000 hours life!

GE's new CFL Biax™ Plug-in LongLast range was designed to further improve reliability and drastically increase life performance without compromising on other key features of the product, such as initial lumen or lumen maintenance.

GE's enhanced line of plug-in products includes technical improvements to Biax™ lamps, where the lamp life has been increased by 66% to 20,000 hours making GE the industry leader in LongLast Plug-in lamps!*

The Triple Biax™ base is changed from round to hexagonal shape, to better fit a wide array of fixtures and applications.

These lamps provide a way to achieve even greater savings with CFLs. By providing extra long life, this industry-leading product lowers maintenance costs.

* 20000h life with 11 hour on / 1 hour off burning cycle with high frequency ballast

Long life benefits

For Lighting Maintenance Contractors, Wholesalers and Lighting Specialists

- better service life – less maintenance cost
- cost saving because of the WEEE fee
- utilize long-life feature in mixed applications (e.g. with LFL)
- longer life lamps are easier to get specified

Application

GE's CFL Biax™ Plug-in LongLast range is an ideal choice for applications with high maintenance costs:

- Store lighting
- Shops, offices
- Entrances, reception areas

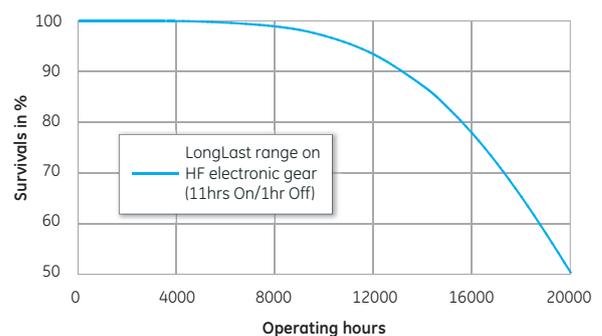

Hex base benefits

For OEMs, Contractors and Consulting Engineers

- hex base for twin applications in downlighters

Overall benefits

- Extremely long and reliable product life – up to 20,000 hours
- Complete product range – 13, 18, 26, 36, 42W, 57W and 70W
- Excellent lumen maintenance
- Environmental friendly product – RoHS compliant
- Can be used on existing control gears and fixtures

Compact fluorescent lamps Electronic Biax™

Energy Saving in Style

Stylish candle shape for versatile applications from chandeliers to wall-mounted fittings.

Elegance Candle

Direct replacement to standard incandescent globes for open or semiclosed fittings.

Elegance Globe

Twisted to fit better – the small size and decorative shape fits almost anywhere that incandescent bulbs are currently used, from table lamps to wall and ceiling fixtures.

Elegance Spiral

Classic light bulb shape offers traditional appearance and energy savings.

Elegance GLS

Direct replacement to standard incandescent Exclusive induction technology for superlong 15000 hours life. Direct replacement for the standard incandescent R80 reflector lamp.

Genura

Available in R50 and R63, feature soft light for diffuse downlighting in attractive glass reflector design.

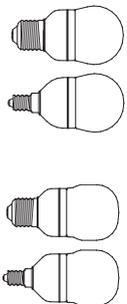

Elegance Reflector

New Elegance CFL lamps from GE

The new complete Elegance CFL range from GE now offers a wide variety of decorative lamps to suit every taste. From representative offices, theaters, hotels, to our own homes - now you can experience the beauty of light and enjoy the long lasting elegance.

Compact fluorescent lamps

GE Biax™ compact fluorescents come in two lamp types – plug-in and electronic. While a majority of the features described here apply to both lamp types, plug in lamps require separate running gear and the gear used can effect the lamp's performance characteristics.

Warm-up times

GE Biax™ lamps offer an almost instant start, but require a few minutes to reach full brightness, particularly in colder temperatures. This slight time lag may initially make the lamp appear dull.

Amalgam technology

GE amalgam dosing technology provides a more consistent light output, not only through lamp life, but also in varying ambient temperatures and lamp orientations.

Using outside

When Biax™ lamps are employed outdoors, they must be used in enclosed fittings. The lamps will reach full brightness when the ambient temperature around the lamp reaches approximately 25°C. The effects of different ambient temperatures on light output for typical lamps is shown in the chart Fig 1. With amalgam products, 90% of light output is achieved between the temperatures of -10°C and +65°C.

Enhancing colour quality

While the colour temperature of Biax™ is similar to an equivalent incandescent lamp (it produces the same 'whiteness' of light), the colour rendering performance (its ability to accurately reproduce

colours) is slightly lower. It is this difference that may lead some users to feel that the light appears dull. However, Biax™ lamps, which use Polyflux triphosphors, are far better at rendering colours than most commonly available fluorescent tubes.

Characteristics of electronic lamps

Dimming of electronic retrofit lamps. As the electronic gear in the base of these lamps needs a full and constant current, they cannot be dimmed or used with other electronic switching devices.

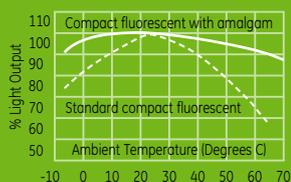

Eliminating flicker

Biax™ lamps operate at very high frequencies thus avoiding the annoying flicker typical of some fluorescent installations operating with conventional control gear.

Using existing fittings

Biax™ lamps are much lighter than many conventional retrofit compact fluorescent lamps and therefore do not impose exceptional loads on light fittings.

Fig 1 Light output relative to ambient temperature

Biax™ maintains an acceptable level of light output within a normal range of temperatures.

Lumen maintenance characteristics of Biax™ and Electronic Biax™ lamps

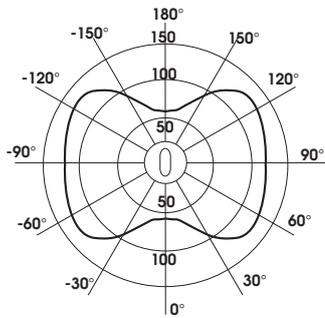

One of the characteristics of Biax™ is a very low fall off in light output over the life of the lamp.

High intensity discharge lamps

GE invented mercury lamps in 1931, high pressure sodium lamps in 1962 and metal halide in 1964.

GE has continually improved its HID lamp category by introducing CMH 20W first to the market. Meeting special lighting requirements, the Lucalox PhotoSynthesis Light lamp has become available for the horticulture industry to provide better growing conditions in countries where the level of sunshine is not smooth.

The HID range falls into several categories: metal halide, sodium discharge lamps divided into high-pressure and low-pressure sodium and mercury. High intensity discharge lamps are characterised by reliability, high efficiency and low operating costs.

Nearly all HID lamps require a ballast and starting gear. GE solved that need and has launched a new range of electronic ballast for CMH lamps. It comprises of a complete series of economic, high quality ballasts with 20, 35 and 70W integral and remote ballasts.

High intensity discharge lamps

Selecting the right product

While all HID lamps offer outstanding efficiency and long life, there are distinct differences in performance among the four basic types of HID lamps. The following two charts should help you to understand these differences so that you can select the right lamp for your application.

Key performance criteria

| | Colour Temperature Options (K) | Colour Rendering (Ra) | Life (Hours) | Efficiency (LPW) |
|----------------------|---|-----------------------|---------------|------------------|
| Metal Halide | 3000 (WDL) 3500 (BDL) 4000 (NDL) 6000 (DL) | 65-93 | 3,500-20,000 | 68-105 |
| High Pressure Sodium | 2 000 | 25-60 | 28,500-55,000 | 66-150 |
| Mercury | 3 500 4 000 | 42-52 | 12,000-24,000 | 19-63 |
| Low Pressure Sodium | 1 800 | | 16 000 | 100-198 |
| | Best option | Good option | | |

Choose the appropriate one from the wide selection of GE metal halide lamps.

- To make lamp selection easier than ever, GE has defined its metal halide range in five distinct groups – ConstantColor™CMH, Arcstream™, Kolorarc™, Multi-vapor™ and Sportlight™.
- GE metal halide lamps with their bright, high quality white light and energy-efficiency are ideal for a wide range of applications.
- Constant colour lamp to lamp throughout life.

GE makes it easy to choose the right metal halide. Simply select the right product family for your task and preferred ballast and you will pinpoint the correct lamp for perfect results.

GE's unique 3 part arc tube design provides higher durability that results in excellent reliability.

ConstantColor™ CMH

Lamps operate on high pressure sodium / metal halide ballasts incorporating thermal protection (to EN IEC 61167) with metal halide ignitors.

Arcstream™

Lamps operate on high pressure mercury ballasts with metal halide ignitor.

Kolorarc™

Lamps operate on Constant Wattage Gear (CWA).

Multi-Vapor™

Lamps for sports and floodlighting.

Sportlight™

High quality metal halide light is ideal for illuminating colour critical public spaces such as shopping areas and walkways.

Applications:

retail display lighting, decorative lighting and spotlighting of individual features.

High intensity discharge lamps

ConstantColor™ CMH™ The light source of the future

Bright Light and Excellent Color Performance

GE's ConstantColor™ CMH™ lamps are the latest advance in a long term lighting revolution. Ceramic Metal Halide lamps provide exceptionally consistent colour rendition helping to highlight both texture and colour. Concentrated brightness and excellent optical control allow maximum design flexibility from floodlighting to area lighting.

- Lamps from 20W–400W
- Long life – up to 20,000 hours
- Consistent colour over life
- Bright light and excellent colour rendition
- High efficiency up to 100 lm/W
- Available in two colour temperatures 3000K and 4200K
- Direct replacement for High Pressure Sodium and Quartz Metal Halide lamps to fit existing installations
- Shrouded versions available for use in open luminaires
- UV control
- Available in elliptical, tubular, linear, single ended and PAR lamp shapes and up to 150 watts for maximum versatility

The Esplanade in Helsinki

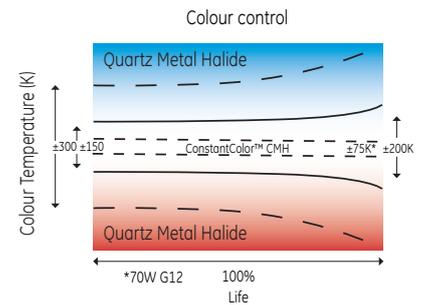

Natural White Light with Maximum Flexibility

A complete range of shapes, wattages and colour temperatures to match all needs

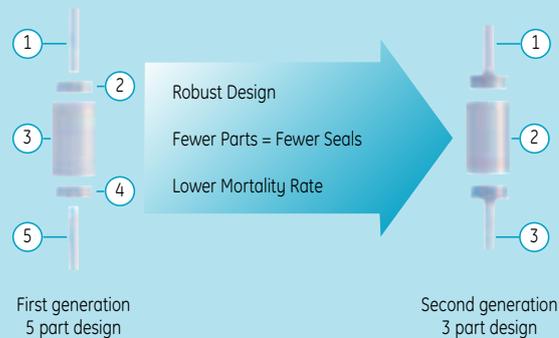

The new range of ConstantColor™ CMH lamps has been designed to provide the best alternative for retail lighting, city beautification and decorative exterior lighting:

- Crisp and vibrant white light
- Excellent colour rendering up to 90 CRI Ra and two colours for flexible lighting solutions
- Exceptional lumen maintenance over life to ensure original lighting design quality
- Constant colour over life and uniformity lamp to lamp for consistent lighting effects
- With GE's unique 3 part arc tube, ConstantColor™ CMH lamps last for up to 15,000 hours with exceptional lumen maintenance for design reliability.
- Lumen efficiency of up to 100 lm/ w gives an almost identical lumen standard as High Pressure Sodium lamps meeting customer requirements in terms of cost of lighting

Borobudur Temple

GE Lighting's Six Sigma quality drive initiated a fresh approach to the customers' requirements of delivering significant reliability improvements. This process determined that a 3 part design of the arc tube would reduce potential weak points in the seals, resulting in increased reliability.

High intensity discharge lamps

ConstantColor™

Choose ConstantColor™ with metal halide ballasts and ignitors for retail display lighting, high quality exterior floodlighting and anywhere a crisp, white light is required.

- Perfect optical control delivering a highly accurate, quality light precisely where you want it
- Long life up to 12,000 hours
- Excellent colour reproduction making it ideal for display lighting
- Good colour consistency throughout life, so your display maintains its features

Single Ended

Kolorarc™

Choose Kolorarc™ with mercury ballasts and metal halide ignitors for commercial and industrial interiors, shopping malls and floodlighting.

- High brightness – providing high illumination levels even when installed in high ceiling areas
- High energy efficiency – offering maximum energy cost savings
- Excellent colour reproduction providing more attractive lighting environments compared to high pressure sodium and mercury arc lamps

Tubular Clear

Multi-Vapor™

Choose high output Multi-Vapor™ lamps with constant wattage auto-transformer (CWA) ballasts for large scale commercial and industrial interiors, shopping malls and floodlighting.

- Extra long life – of up to 20,000 hours on CWA gear
- Warm, rich colour – that gives merchandise, furnishings and decor added appeal
- High colour temperatures – to blend exceptionally well in mixed applications with incandescent, halogen and warm white fluorescent sources

Elliptical Diffuse

Sportlight™

Choose Sportlight™ high wattage lamps for sports and floodlighting. The excellent colour rendering and appearance of these lamps makes them especially suitable where television cameras are used.

- Excellent optical control – with minimal beam spread even at long focal lengths
- High output – providing high illumination levels even from high towers
- Excellent colour performance – accurately reproducing colours to create more authentic and attractive floodlit environments

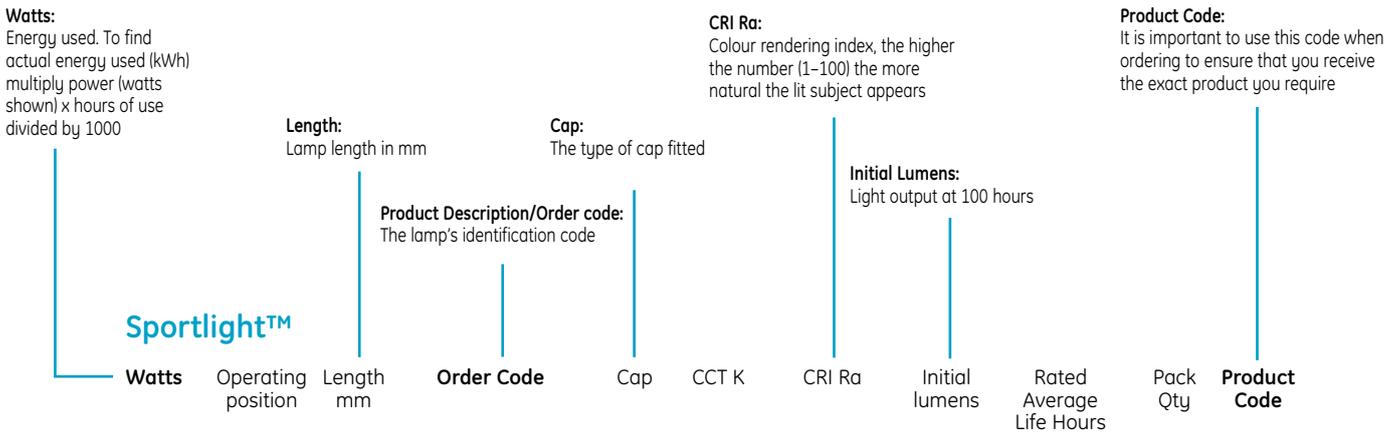

Tubular Clear
Hot Restrike
Internal Ignitor

Metal Halide identification

The following glossary of terms and descriptions can help you when checking metal halide lamp specifications and how to use the order codes when ordering products. Within each product line, lamps are divided into families – within families, lamps are listed by wattage.

* Initial life claim at launch. Testing continues to final design life.

** 3000K in horizontal burning position, 3600K in vertical burning position

ConstantColor™ CMH lamps operate on high pressure sodium ballast and metal halide ignitor, with the exception of KRC250/CMH/830/T/H/E40 type that operates on mercury or metal halide ballast and metal halide ignitor.

Operating from suitable metal halide / high pressure sodium (HPS) ballast and metal halide ignitor. Arcstream™ lamps are only suitable for operation in fully enclosed fixtures where lens/diffuser material must be able to contain fragments of hot quartz or glass (up to 1100 °C)

High intensity discharge lamps

Kolorarc™

Operating from suitable mercury or metal halide ballast rated 3.5A and metal halide ignitor. Low loss ballast recommended for 400W 6000K (960) products - see lamp data sheet for details.

* Enhanced lumen performance operating from special "High Output" ballast rated 3.8A - see lamp data sheet for details. Kolorarc™ lamps are only suitable for operation in fully enclosed fixtures where lens/diffuser material must be able to contain fragments of hot quartz or glass (up to 1100 °C)

Operating from CWA control gear

Initial lumen values and Rated Average Life based on vertical orientation for Universal types. Multi-Vapor™ lamps must operated in fully enclosed fixtures except those marked

*when used VBU or VBD +/-15°.

For lamps requiring enclosed fixtures, lens/diffuser material must be able to contain fragments of hot quartz or glass (up to 1100 °C)

Lamps operated in the vertical position that are not designated "Enclosed Fixtures only" lamp may be used in an open or enclosed lighting fixture depending upon the application and operating environment.

For example, if the lamp is located near combustible material or in an area which is unoccupied for extended periods, an enclosed fixture which can contain fragments of hot quartz or glass is recommended. For more information contact your fixture manufacturer.

Please refer to technical catalogue/data sheet for appropriate ballast and ignitors. Sportlight™ lamps are only suitable in fully enclosed fixtures, where fixture lens/diffuser material must be able to contain fragments of hot quartz or glass (up to 1100 °C)

High intensity discharge lamps

Lucalox™ XO Photosynthesis Light Lamp (PSL)

Low operating costs, long useful life, energy-efficient performance

Lucalox™ T

Lucalox™ E

- High efficiency – up to 150 lumens per watt – converting more energy into light, cutting energy and operating costs.
- Outstanding life – up to 55,000 hours substantially reducing lamp maintenance and replacement costs.
- Lamps that start out bright and stay that way, offering high maintained lumens over life.

Lighting for Horticulture

Specially developed for greenhouses, the Lucalox™ PSL offers the twin benefits of stable lumen maintenance and a full spectrum content that promotes photosynthesis.

Lucalox™ Standard

The highly efficient, long-life lamp

- Ideal for streetlighting, commercial and industrial use
- Wide range of wattages and sizes
- Up to 28,500 hours life
- Highly efficient, producing 130 lumens per watt

Lucalox™ XO, PSL

The extra high output and long-life lamp

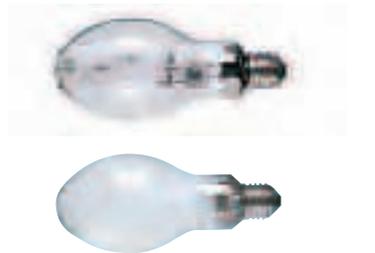

- Extra light – up to 20% more lumens
- Long life of up to 32,000 hours
- Highly efficient, producing 150 lumens per watt
- PSL is ideal for Horticulture Lighting

Lucalox™ Internal Ignitor

The efficient compact solution with built in ignitor

- Simple – luminaires only need regular HPS ballast, simpler luminaire designs can be used
- Efficiency and long-life from a simple and versatile retrofit lamp
- Compact – enables use of small fixture lighting systems

Lucalox™ TD (Double-ended)

Lucalox™ efficiency in an ultra compact size

- Compact size – small size fits ultra compact fixtures
- Excellent optical control – delivers a concentrated beam of light exactly where needed
- High efficiency
- Long life

Lucalox™ E-Z Lux™

Converts mercury sockets to highly efficient high pressure sodium lighting

- Direct replacement for mercury lamps – operates on mercury ballasts
- More efficient, higher lumens than mercury – 14% energy cost savings – 40%+ more light

Lucalox™ Superlife

Extra arc tube provides light instantly after power interruption

- “Superlife” arc tube provides light instantly after momentary power interruption, and will increase to full output in 1–2 minutes
- Longest life – dual arc tubes provide up to 55,000 hour rated life

High intensity discharge lamps

High Pressure Sodium identification

The following glossary of terms and descriptions can help you when checking high pressure sodium lamp specifications and explains how to use the order codes when ordering products. Within each product line, lamps are divided into families – within families, lamps are listed by wattage.

Watts: Energy used. To find actual energy used (kWh) multiply power (watts shown) x hours of use divided by 1000

Length: Lamp length in mm

Cap: The type of cap fitted

CRI Ra: Colour rendering index, the higher the number (1-100) the more natural the lit subject appears

Product Code: It is important to use this code when ordering to ensure that you receive the exact product you require

Initial Lumens: Light output at 100 hours

Product Description/Order code: The lamp's identification code

Lucalox™

| Watt | Operating position | Length mm | Order Code | Cap | CRI Ra | Initial lumens | Rated Average Life Hours | Pack Qty | Product Code |

High pressure sodium lamps operating from HPS ballast and HPS ignitor

*Nominal, reference only

⚠ *External ignitor

⚠ Internal ignitor

GE Lucalox™ XO Lamp

- The new Zirconium in the lamp ensures a higher quality of vacuum in the outer bulb than with other getter systems.
- The new GE Reliable Starting Technology, GRS, improves the starting characteristics by permanently bonding an electrically conductive ceramic to the arc tube surface.
- Higher transparency ceramic for improved light output!
- Monolithic construction: a totally new arc tube concept for higher reliability. The body and the end plug is now a single unit. GE "XO" lamps always retain the sodium amalgam at the monolithic end. This feature reduces the undesirable chemical reactions and end blackening.

**Available Q3 2007

GE Lucalox™ Lamp

- **Nickel Alloy Cap**
Corrosion free, good electrical contact throughout life and moisture damage is eliminated
- **High maintained light output**
- **Shorter re-strike time**
Than either metal halide or mercury lamps
- **Starts and operates at temperatures**
as low as -40°C
- **Provides a warm golden light**
- **Average rated life of up to 28,500Hrs**
Increased to 55,000 for Superlife versions.
Offering lower replacement costs

- **Lamp Cap Identification**
Helps measure the lamp's performance over time

- **Clean Arc Tube**
- **Highest efficiency/lowest operating costs**
among the High Intensity Discharge (HID) product range with acceptable colour rendering

Mercury

High quality colour
from a versatile range
of lamps

Kolorlux™

- Ideal for commercial, industrial and outdoor applications with a wide choice of lamp types and ratings.
- Good colour rendering.
- Modest installation and running costs.

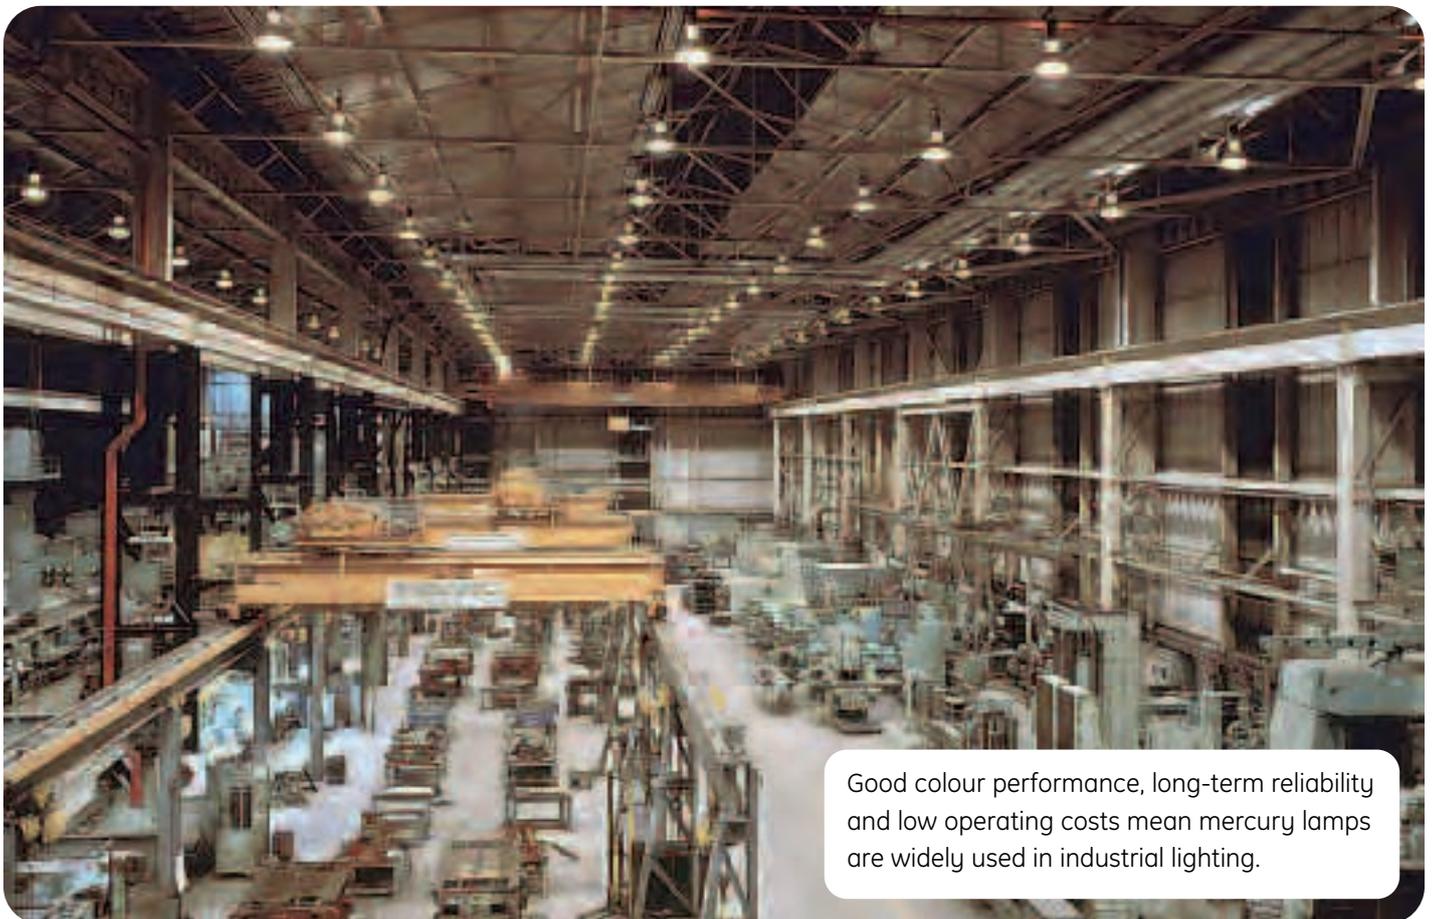

The Kolorlux range offers six different types of mercury lamp, each with their own particular qualities.

Kolorlux Standard – Traffic and industrial lamps.

Kolorlux Deluxe – Warm colour and enhanced light output for indoor and outdoor applications.

Kolorlux DX Long Life – Meeting IEC and ANSI specifications for applications demanding standard US spec.

Blended Light – An alternative to incandescent requiring no control gear and giving warm white light with good energy efficiency.

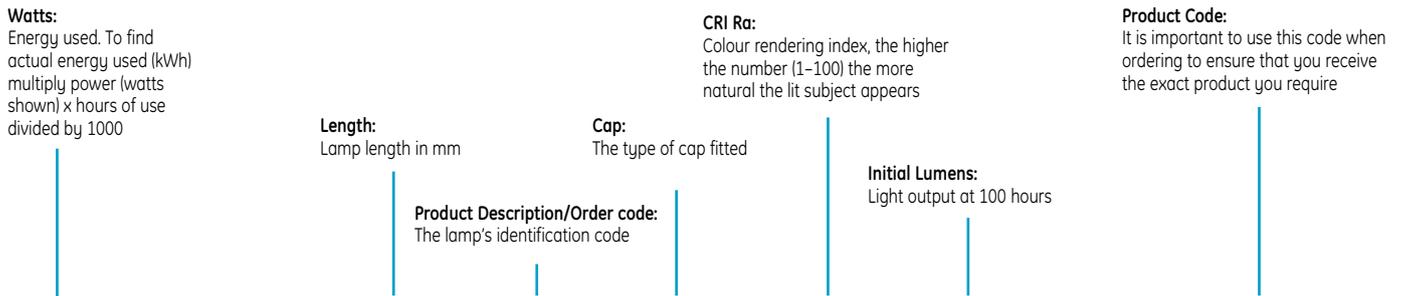

Good colour performance, long-term reliability and low operating costs mean mercury lamps are widely used in industrial lighting.

High intensity discharge lamps

Mercury and Low Pressure Sodium identification

The following glossary of terms and descriptions can help you when checking mercury and low pressure sodium lamp specifications and explains how to use the order codes when ordering products. Within each product line, lamps are divided into families – within families, lamps are listed by wattage.

Mercury – Operating on mercury ballast

| Watt | Operating position | Length mm | Order Code | Cap | CRI Ra | Initial lumens Life Hours | Rated Average | Pack Qty | Product Code |
|------|--------------------|-----------|------------|-----|--------|---------------------------|---------------|----------|--------------|
| 50 | U | 130 | H50/27 | E27 | 40 | 1800 | 16000 | 40 | 93719 |
| 80 | U | 156 | H80/27 | E27 | 40 | 3800 | 20000 | 40 | 93720 |

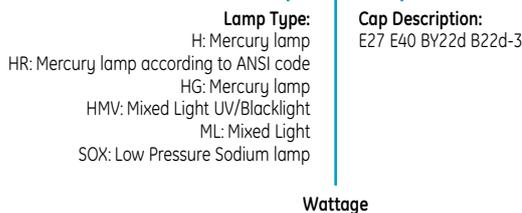

Lamp: Lamp type and product features

Operating position: Orientation of lamp

Pack Quantity: The number of lamps in one box

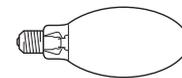

Rated Average Life: The point in time when 50% of installed lamps are still burning

H 125 / 27

GE SOX-Plus Lamp – Driven by Six Sigma Quality

- **Low Conductivity Mica Support**

- **Better Electrodes**

Improved coating technique through Statistical Process Control

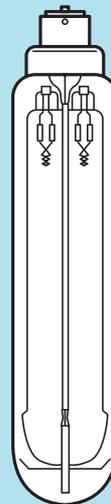

Superior conditioning through better activation of emitter material

Sodium resistant sleeving

- **Improved Gas Filling**

Better lamp starting due to Statistical Process Control of purity and pressure fill gas

High vacuum insulation in outer jacket

- **Smooth Arc-Tube**

No pitting of surface by features that may act as weak points

No indentations for sodium to evaporate over lamp life and reduce efficacy

Minimal discolouration of sodium resistant coating due to improved manufacturing process

- **Graduated Insulating Coating**

Optimises lamp energy balance

- **Reliable Metal Top Clip**

Robust to vibration in poor weather conditions

Mica spacer for low heat conductivity from arc-tube

Low pressure sodium

Energy-efficiency
and reliability
through life

SOX™

- GE's SOX lamps produce light at wavelengths close to the peak sensitivity of the human eye and so provide one of the most efficient types of artificial light.
- Particularly suitable where long operating hours are demanded such as lighting roads, tunnels and pathways, where SOX lamps' remarkably low-energy/high output characteristics make them a cost-effective choice.

GE's SOX lamps offer outstanding performance and reliability throughout their rated life.

Outstanding energy – efficiency

producing up to 4060 lumens from just 26 watts.

Long-life

16.000 hours rated average life.

Long-term reliability

with lamp survival rates of up to 80% at 12,000 hours.

Long-term performance

offering 80% lumen maintenance at maximum rated life.

High intensity discharge lamps

Discharge lamps

Run-up and re-strike time

When a discharge lamp is switched-on, current flows through gas in the arc tube and the power dissipated generates heat vaporising the mercury, sodium or halide filling until stable electrical operating conditions are achieved. This is known as the run-up or warm-up period. The run-up period can be several minutes until the lamp stabilises and achieves published lumen output and colour performance. Run-up value shown in the table is the time taken for the lamp to reach 90% of final light output.

Re-strike time is based on lamps that have fully run-up and then a momentary break in the supply voltage occurs causing extinction.

Actual run-up time and re-strike time will vary according to application, type of fitting used, factors affecting warm-up/cooling rate of the lamp and the ambient temperature.

Most discharge lamps other than high pressure mercury and Multi-Vapor™ are started by a high voltage pulse generated by a separate ignitor, which automatically switches-off after the lamp has started. Use of an external electronic starting device simplifies lamp construction and provides reliable starting performance.

Notes:
1 In Floodlight
2 Hot Re-strike version also available

* Not available as SOX-Plus
Instant for ignitor circuits

General information

Life of HID lamps

All life ratings for GE high intensity discharge lamps are expressed in terms of 'Rated Average Life', quoted in hours, where average is the 'median' value. This means the number of burning hours until 50% of lamps in an installation (of at least 30 lamps) are expected to have failed or not be operating to the published performance specification. Life ratings are based on lamps operating from suitable control gear for at least ten hours per switching. Lamps operating less than ten hours per start will have a reduced Rated Average Life (typically 25% reduction for each burning cycle reduction of 50%).

Ambient operating temperature

GE Lighting discharge lamps will start reliably at an ambient temperature down to -40°C for Lucalox™ high pressure sodium, -30°C for metal halide and -20°C for high pressure mercury.

Supply Voltage

Discharge lamps in this catalogue are suitable for supplies in the range 220V to 250V 50/60Hz (or 380V to 440V for some Sportlight™ products) when using suitably rated electromagnetic or electronic control gear. Supplies outside this range require a transformer (conventional, high reactance or CWA) or an electronic ballast to ensure correct lamp operation.

Lamps start and operate at 10% below rated supply voltage when the correct control gear is used. However, in order to maximise lamp survival, lumen maintenance and colour uniformity the actual supply voltage and ballast design voltage should be within $\pm 3\%$. Supply variations up to $\pm 5\%$ are acceptable for short periods only; otherwise lamp life and/or performance will be adversely affected.

Measuring mean supply voltage at the installation and selecting the appropriate ballast setting/tapping is the recommended method of matching multi-voltage rated ballasts to actual supply voltage.

Regular switching of lamps

Continuous operation of mercury and metal halide lamps can increase the slight risk that lamps may shatter, particularly if run beyond rated-life. It is recommended, particularly towards rated end-of-life, that lamps are switched-off for 15 minutes at least once in every 24 hour period to minimise the risk of such failure.

Most metal halide lamps must be fully enclosed within a luminaire to ensure retention of any fragments in the event of a shattering failure mode - see individual lamp sections in this catalogue and lamp data sheets for details.

Circuit Fusing

Recommended HBC fuse and MCB ratings for discharge lamps are given in lamp technical data sheets and publication 'Fuse Ratings for Discharge Lamps', available from GE Lighting.

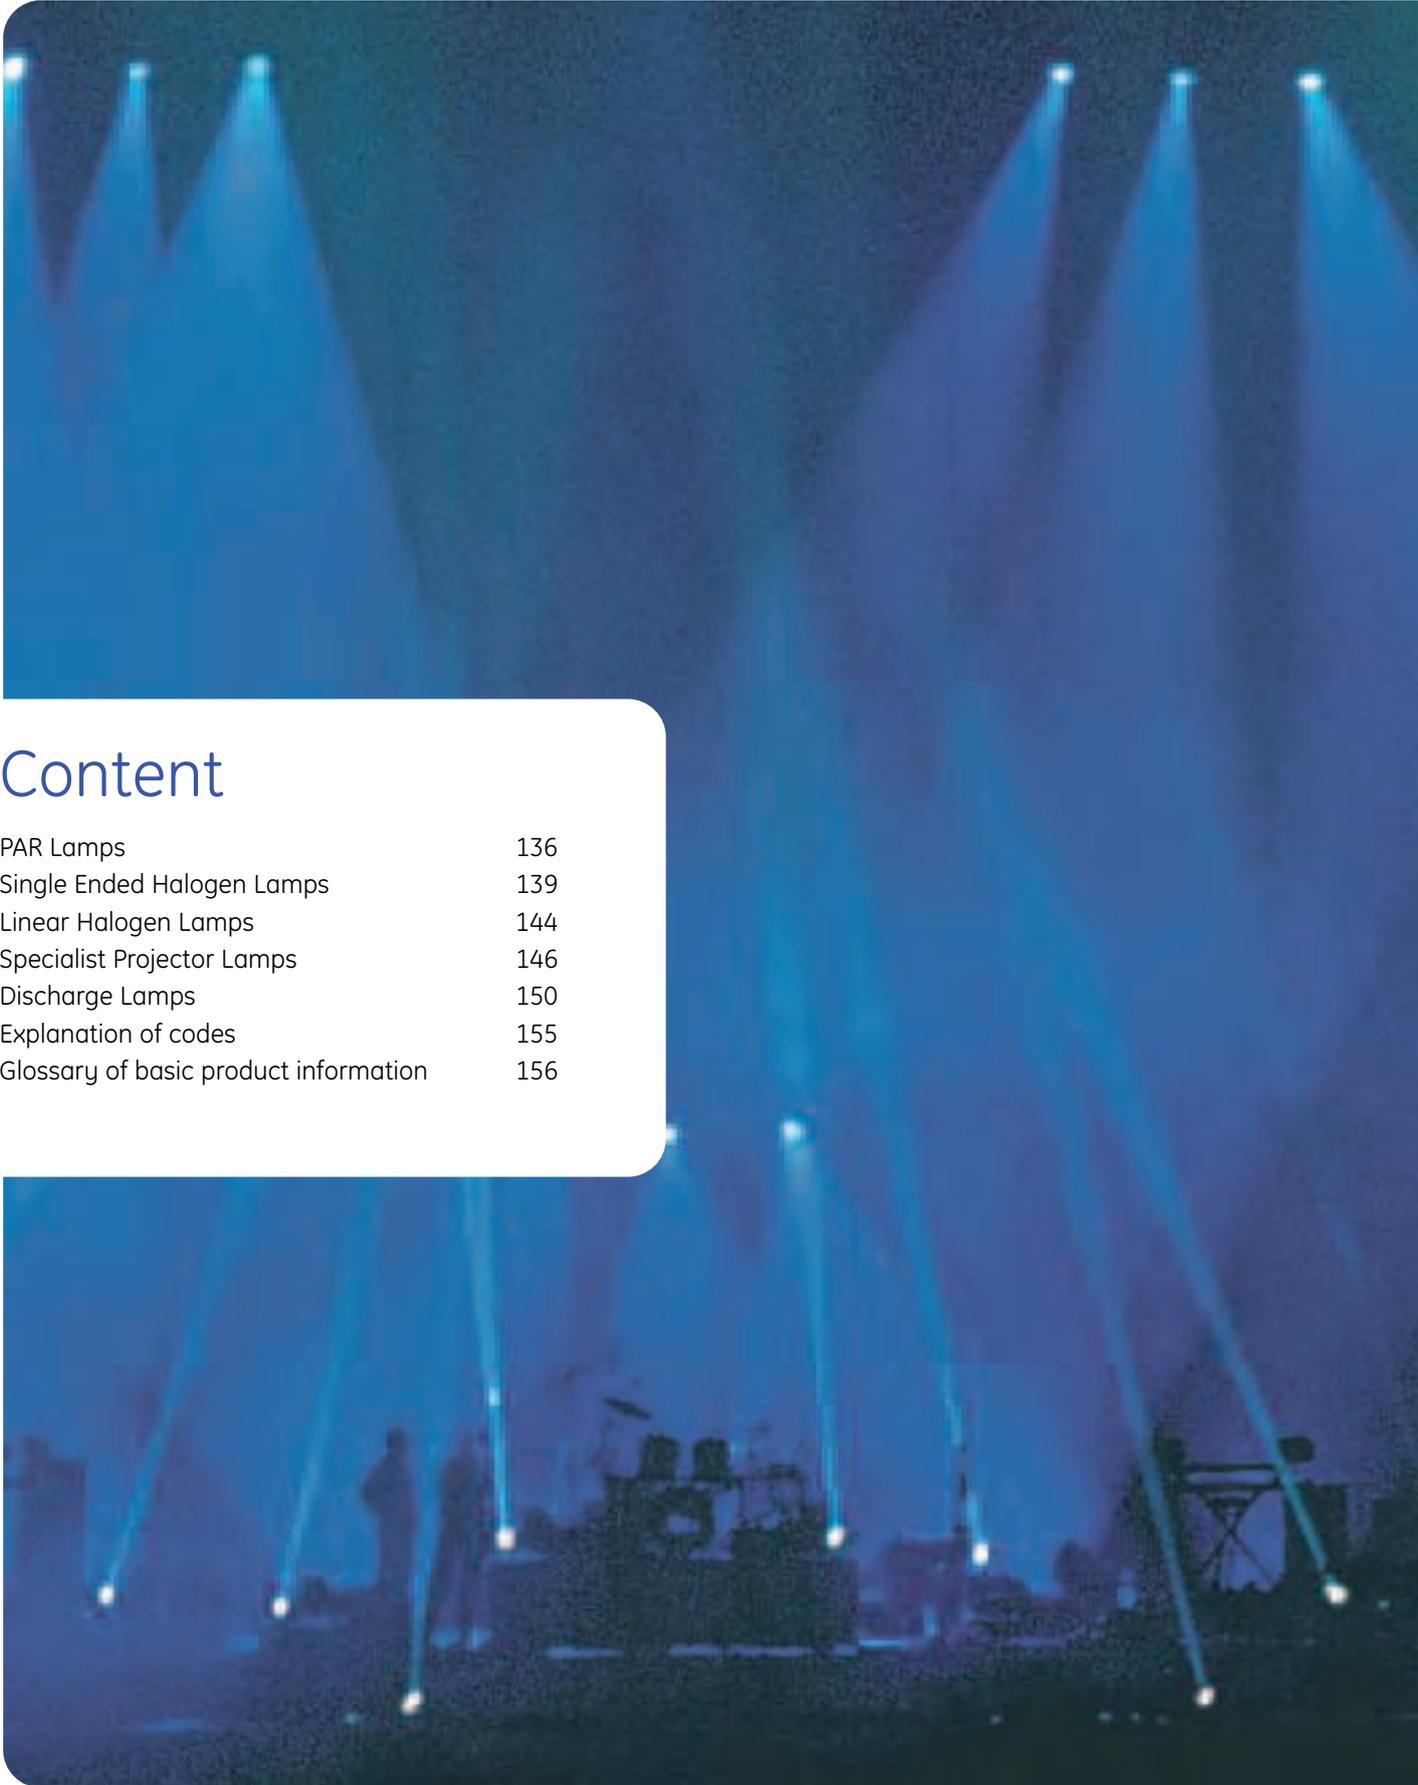

Further information

Technical data sheets provide more detailed technical information for the products listed. Contact GE Lighting Customer Service or local sales office to obtain copies.

GE Lighting has been a leading supplier to Entertainment and Specialty lamp users for many decades and continues its pioneering work in the development of new and innovative light sources.

Entertainment lamps are being sold under the SHOWBIZ® brand. GE Lighting continues to provide lamps for stage, studio, nightclub and theatre lighting, to architectural and fiber optic lighting applications for this segment.

Lamp: Description of lamp type, and product features

LIF Code: These are assigned by the Lighting Federation of London, UK. They ensure electrical and mechanical inter-changeability of similarly coded lamps. LIF codes are divided into groups according to the primary application

Filament H & W: Filament's size in mm

Rated Average Life: The point in time when 50% of installed lamps are still burning

ANSI Code: These are 3-letter codes assigned by the American National Standard Institute. They provide a system of assuring mechanical and electrical inter-changeability among similarly coded lamps from various manufacturers.

Notes:

- A - Hemispherical shield in front of filament masking all direct light
- B - Operate at or near horizontal
- C - Protect from moisture. Safety screening techniques recommended
- D - Replace broken lamp immediately. Inner bulb pressurised and could shatter unexpectedly
- E - Use safety screen external to lamp
- F - Operate BDTH
- G - Operate BD ±30°
- H - 100V rating available to order
- J - 120V rating available to order
- K - Specially designed for searchlight applications
- L - Twin filament lamp. Lumen figures relate to single and twin filament options
- M - Tungsten Halogen minimum bulb wall temp 250°C
- N - 3 or 4 amp HBC fuse necessary
- P - 5 or 6 amp HBC fuse necessary
- Q - 6 or 7 amp HBC fuse necessary
- R - 10 amp HBC fuse necessary
- S - Due to internal integral reflector nominal lumens not shown
- T - Obscured top
- V - Due to integral dichroic reflector nominal lumens not shown
- W - Axial coiled coil single ended lamps will generally give better reliability against premature arcing if orientations in which the main support spine is under the filament are avoided

PAR Lamps

PAR lamps provide a robust and flexible design solution for a wide range of theatre, studio and nightclub applications.

Gemini and Marc lamps should be operated with the plane of the reflector vertical.

These lamps should not be operated for periods of less than three minutes since short operating cycles reduce life and degrade performance.

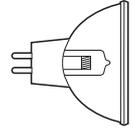

Fig. 1

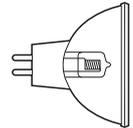

Fig. 2

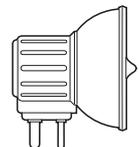

Fig. 1

Discharge Lamps

New CSR & CSD lamps have been introduced to increase the range of discharge products for use in Stage & Studio applications.

GE UV Control lamps are the newest addition to the GE hot restrike line of entertainment metal halide lamps.

- 95% Reduction of UVB and UVC
- Greater than 85% reduction of total UV emissions
- 5600 Kelvin colour temperature
- No reduction in lumen output

Explanation of codes

Lamps listed in this catalogue are those designed for use as follows:

A1 Prefix – L.I.F. (Lighting Industries Federation) reference indicates lamps which were primarily designed for use with slide, film and overhead projectors.

ANSI Codes – These are 3-letter codes assigned by the American National Standards Institute. They provide a system for assuring mechanical and electrical interchangeability among similarly coded lamps from various manufacturers.

CP Prefix – Lamps designed for use in conjunction with film balanced for 3200K. These are single ended types intended for use in Fresnel/ellipsoidal luminaires etc.

Special and Experimental Lamps

In addition to these standard ranges, a number of similar types are available to special order and in most cases, a minimum order quantity will apply. These include non-standard voltage ranges of some types e.g. 100V, 100/115V, 120V and also a number of types which have the GE "HX" or "THE" prefix.

P2 Prefix – Again for use with 3200K film stock for open faced luminaires and video sun guns.

P1 Prefix – For use with 3400K film stock.

T Prefix – Lamps intended for theatre luminaire applications. These are of lower colour temperature (2900 - 3050K) and longer life than the often similar CP types above.

C.S.I. – Discharge lamps with a colour temperature of around 4000K for outside broadcast and follow spot use.

C.I.D. – Discharge lamps with a colour temperature of 5500–6000K for location filming and applications such as disco lighting where a very bright compact source is required.

Lamp Bases

The listings use the IEC International designations for lamp bases. Where appropriate, alternative local descriptions are appended.

Incandescent tungsten halogen lamps

Filament Format

The listings use the following codings for filament shape:

S.C. – Axial Single Coil – equivalent to ANSI C8

C.C. – Axial Coiled Coil – equivalent to ANSI CC8

M.P. – Monoplane Grid – equivalent to ANSI C13

B.P. – Biplane Grid – equivalent to ANSI C13D

T.F. – Twin Monoplane Grid – equivalent to ANSI 2C13

S.C.H. – Single Coil Hexagonal – equivalent to ANSI 6-C8

S.C.S. – Single Coil Square – equivalent to ANSI 4-C8

As the result of extensive and sustained development work, much of it original, GE is able to offer a comprehensive range

due to the GE policy of exploiting the important advantages of compact size offered by quartz halogen construction.

CP Range of Lamps for Fresnel and Spotlight Fittings

of lamps of quartz construction, operating on the tungsten halogen principle for all Television Studio, 'motion picture', and Theatre lighting purposes.

GE has been strongly supported by the television and film industries in its decision to discontinue glass lamps for studio lighting purposes. This is because the industry has appreciated the financial advantages of quartz halogen lamps, their reliability and virtually constant colour temperature.

The increase in the use of the lamps we now manufacture is

As a result GE is able to supply quartz halogen lamps for use in Fresnel and spotlight fittings from 300 watts to 24,000 watts. These lamps employ a wide range of commonly accepted bases. This gives fittings manufacturers a comprehensive range of compact lamps and permits the construction of smaller, lighter and more efficient luminaires.

Glossary of basic product information

Rated Average Life

Average life ratings of Projection Lamps are based on closely controlled laboratory tests of lamps, at their rated voltage, over a long period of production time. Rated Average Life is not necessarily the same as service life; mechanical shock and vibration, voltage fluctuation, temperature and other environmental factors may result in shorter service life. As with any average value, some individual lamps may operate longer, and some may operate shorter, than their Rated Average Life. (Supply voltage variation can significantly affect lamp life; see comments under Lamp Life Ratings, page 107).

'T' Class Lamps for Theatre Spotlight Fittings

With this group of lamps GE is continuing their policy of developing quartz halogen lamps. These lamps operate at a lower colour temperature than the CP range. An average life of a remarkable 750 hours is achieved for most of the GE range. Similar cost savings to those offered by quartz halogen CP lamps are now presented by the quartz halogen 'T' range.

Typical Working Distance

For Multi-Mirror® and other reflector lamps and MARC™ lamps, the Working Distance shown is the distance from the front surface of the reflector rim to the film plane, in the optical system for which the lamp was first designed. In most cases, it provides a uniform plane of light for the intended aperture.

Light Centre Length (LCL)

This dimension defines the location of the filament in relation to the lamp base. It is measured from the geometric centre of the filament to a specified point on, or plane through, the base. Light Centre Length is subject to manufacturing tolerances.

Maximum Overall Length (MOL)

This dimension includes the lamp bulb and all rigid parts of the base. Since the listed lengths include maximum tolerances, actual lamps are generally slightly shorter.

Approximate Initial Lumens

The value shown is based on spherical photometry, at rated voltage, of lamps that have been seasoned for

approximately 15% (or a minimum of 2 hours) or more of their rated average life.

Approximate Colour Temperature

The radiation within the visible spectrum from tungsten filament lamps is similar in spectral distribution to that from a "blackbody" at specific colour temperatures. The Colour Temperatures shown are approximate initial values in Kelvin (K) for lamps operated at rated voltage. As the spectral distribution of MARC lamps does not conform to that of a "blackbody", the values shown are 'correlated' colour temperatures expressed in Kelvin.

Important Notice

This catalogue contains accumulated data to November 2003. Additional information is constantly being uncovered through research and testing, which may modify the data given herein. This is particularly true of newer lamps. For the latest lamp design data and information, contact your General Electric Lamp Representative. The data and suggested applications contained in this catalogue, as well as any additional information our representative may be able to furnish, are for general information only and are not intended and should not be taken as representations or warranties as to the suitability of a lamp for any particular attention or use in any particular equipment, nor are our representatives authorised to make any such representations or give any such warranties. Applications and conditions of use are many and varied, and beyond our control. We cannot possibly have the same degree of knowledge that the purchaser has with respect to the design of their equipment and the conditions of its use. Therefore, it is up to the purchaser to make their own determination as to the suitability of a lamp for his intended application or use and to assume the responsibility for that determination. General Electric desires to supply the best possible products at all times. For this reason, General Electric reserves the right to make changes in its products when it believes such changes will improve its products.

Operating Temperature of Tungsten Halogen Studio Lamps

The following maximum and minimum temperatures are suggested for optimum life. Operation outside these figures will not necessarily cause immediate failure but will affect life adversely to an increasing extent.

Seal - 450° C maximum - Above this figure the sealing foil oxidises at a rate increasing with temperature and is frequently the cause of short life due to seal failure.

Bulb - 250° - 800° C - Outside this range the halogen cycle becomes less efficient and blackening may occur.

Temperatures above 1200° C will cause the bulb to soften.

Pins - 350° C maximum - Above this figure the plating on the pins may lose adhesion and the contact will deteriorate. Such deterioration may form local hot spots which rapidly worsen and may result in arcing and irreparable damage to both lamp and holder. Should signs of this be evident on removal of a failed lamp, it is important that a good contact is restored by replacing the lampholder before the next lamp is fitted. Otherwise the new lamp will rapidly fail in a similar manner."

Fusing of Tungsten Halogen Studio and Theatre Lamps

A lamp normally fails at end of life by fusing of the filament. Often an arc then forms and as there is little resistance to limit the current this rises to a very high value which if maintained can result in a serious overload on the envelope and seals. This might result in the lamp shattering. A quick acting high breaking capacity fuse must be connected in the supply line in all applications. Suitable types are given in BS88 (IEC 60269), IEC 60127 or IEC 60241.

Discharge lamps

Even with all the advances which have been made in tungsten halogen technology in recent years there are still occasions, particularly whilst working on location, when handling the number of fittings required to give an acceptable illumination level can be a logistical headache.

One GE metal halide discharge lamp can provide more light than three tungsten halogen lamps of the same rating. That means one third the power consumption and one third the number of fittings to transport and aim. The potential for major cost savings is clear. GE Lighting has led the way in adapting discharge lamps for use in the performing arts. The company was the first and for many years the only manufacturer to offer metal halide lamps in the compact, single ended capsule format. The minimal dimensions of these lamps can be incorporated into fittings which are much smaller than corresponding luminaires using double ended

lamps of the same power. With a near point light source excellent optical control is possible.

Compact iodide lamps are also available in a sealed beam format. With the light source carefully positioned in the reflector, optimum optical performance is guaranteed. The nitrogen filling gas in the outer bulb prevents oxygen attacking the seal of the inner capsule and so increases the life of the lamp dramatically.

All CID discharge studio and stage lamps are dimmable to 50% of peak lumens and the great majority are available in hot re-strike versions for applications where frequent changes in lighting levels are required. All lamps will re-strike within ten minutes of switch off.

Operating Temperature of Discharge Studio Lamps

The following maximum and minimum temperatures are suggested for optimum life. Operation outside of these figures will not necessarily cause immediate failure but will effect life adversely to an increasing extent.

Cap/bulb interface capsule lamps - 450° maximum
Above this figure the sealing foil oxidises at a rate increasing with temperature and is frequently the cause of short life due to seal failure.

Bulb

capsule lamps 700° - 1000°C

sealed beam lamps 150° - 400°C

Above 1000°C, quartz may devitrify, which will cause the arc tube to leak, loss of dose will cause the arc tube to operate below the minimum temperature, the metal halides will not vaporise as required, and lamp performance will be impaired.

Pins - 350°C maximum

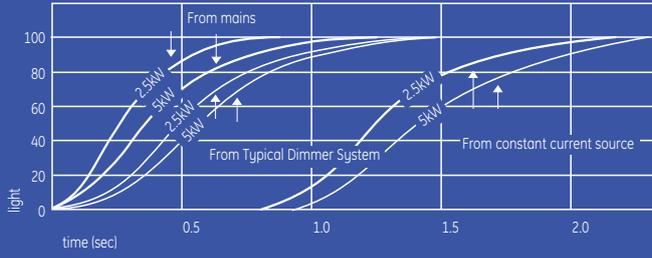

Above this figure the plating on the pins may lose adhesion and the contact will deteriorate. Such deterioration may form local hot spots which rapidly worsen and may result in arcing and irreparable damage to both lamp and holder. Should signs of this be evident on removal of a failed lamp, it is important that a good contact is restored by replacing the lampholder before the next lamp is fitted, otherwise the new lamp will rapidly fail in a similar manner.

N.B. For sealed beam lamps - to ensure that the above conditions are met, it is important that the lamp does not operate above 400°C even in an enclosed fitting.

Fusing of Discharge Studio and Theatre Lamps

A quick acting high breaking capacity fuse must be connected in the supply line in all applications. Suitable types are given in BS88 (IEC 60269), IEC 60127 or IEC 60241.

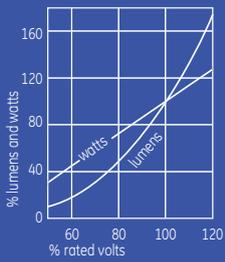

Turn on time of studio lamps

| 8 | 12in | 300 | F8W/BLB | Blacklight Blue | - | - | 5000 | - | 25 | 39884 |

Lamp: Description of lamp type, and product features

CCT K: Colour temperature – Kelvin. The visual warmth or coolness of the light. The higher the number the whiter or cooler the light appears

Rated Average Life: The point in time when 50% of installed lamps are still burning

Initial Lumens: Light output after the initial 100 hours of operation

F 4W / BLB

Identifies lamp as fluorescent

Identifies product type

Identifies lamp wattage

A healthy aquarium

With the exception of a few species, fish do not require special light for health. In fish-only tanks, lighting should minimise the growth of algae while maximising the colour of the fish. In tanks containing coral and plants, the spectral distribution of the light becomes a factor. For the coral and plants to survive, there must be adequate amounts of light in the blue and red regions for the spectrum to allow for photosynthesis. The light should also be of sufficient intensity for plant respiration. The amount of light should be tempered, however, as too much light could startle the fish.

Typical setups have alternating 12-hour periods of light and dark. To prevent fish startling, a blue/actinic lamp is used before the white light source is turned on.

Glossary

A

Additional Information

Typical application and/or other important information including footnotes, operating information, features and benefits.

Amperes ("Amps")

A measure of electrical current. In incandescent lamps, the current is related to voltage and power as follows: Current (Amps) = Power (Watts) / Voltage (Volts)

American National Standards Institute (ANSI)

A consensus organization which coordinates voluntary standards for the physical, electrical and performance characteristics of lamps, ballasts, luminaires and other lighting and electrical equipment.

ANSI Ballast Type

Ballast type used to operate lamp.

ANSI Codes

These are 3-letter codes assigned by the American National Standards Institute. They provide a system of assuring mechanical and electrical interchangeability among similarly coded lamps from various manufacturers. General Electric uses the assigned ANSI Codes as Lamp Ordering Codes for most Projection Lamps.

[Primary] Application

This column indicates the original primary application of the lamp. However, lamps can be, and often are, used in other types of equipment where their design features meet the requirements of the application.

[Effective] Arc Length

In High Intensity Discharge lamps this is the length of the arc that you can see outside of the bulb.

Atmosphere

This field designates the type of gas or vacuum the filament operates within. Gas filled lamps are more efficient than vacuum lamps.

B

Ballast

An auxiliary piece of equipment designed to start and to properly control the flow of power to discharge light sources such as fluorescent and high intensity discharge (HID) lamps. Some lamps require the ballast to have thermal protection.

[ANSI] Base or Socket

The type of base or socket. For Incandescent and Halogen lamps, when Footnote 23 or BB (Brass Base) appears in the Lamp Designation or Description column, the lamp is supplied only with a brass base. If Brass Base (Footnote 23 or BB) does not appear, the lamp is supplied only with an aluminum base. For Halogen PAR lamps, when Footnote 55 or NP (Nickel Plated) appears in the Lamp Designation or Description column or in the Base Description, the lamp is supplied only with a Nickel Plated Brass Base. Brass Bases and Nickel Plated Brass Bases are recommended for outdoor lighting applications.

[Max] Base Temperature

The maximum operating temperature of the base in Celcius.

[Max] Base Temperature Rise

The maximum increase in temperature from ambient temperature to operating temperature in the base.

Beam Angle

The angular dimension of the cone of light from the reflectorized lamps (such as R and PAR types) encompassing the central part of the beam out of the angle where the intensity is 50% of maximum. The beam angle sometimes called the "beam spread" is often part of the ordering code of reflectorized lamps. Example: The GE Lamp 50PAR30/HIR/NFL25° is a 50 watt PAR30 narrow flood lamp with a beam angle of 25 degrees. Generally, beam angles 25 degrees and greater are considered Flood, while angles less than 25 degrees are considered Spots. See also Field Angle.

[Approximate] Beam Spread

For reflector type lamps. The total angle of the directed beam (in degrees horizontal or vertical) to where the intensity of the beam falls to 50% or 10% of the maximum candlepower value as indicated.

Biax®

GE trademark for the biaxial family of high-efficiency and long life compact fluorescent bulbs.

Blacktop

Whether or not the top of the miniature lamp has a blacktop coating. The coating is used to control unwanted brightness or glare.

Bulb Material or Coating

The type of glass (or quartz) used in the glass envelope surrounding the light source. The material can also have coatings applied to achieve particular performances.

Bulb [size]

Bulb shape followed by its size (the maximum diameter of the bulb expressed in eighths of an inch). For Compact Fluorescent products, "S", "D", "T", and "Q" are used to represent Single, Double, Triple and Quad Biax® sizes. The code also includes a reference such as T4 to represent the size of the tube. Rectangular headlamps are designated as "Rect" and the number of millimeters horizontally.

C

Canadian Standards Association (CSA)

An organization that writes standards and tests lighting equipment for performance as well as electrical and fire safety. Canadian provincial laws generally require that all products sold for consumer use in Canada have CSA or equivalent approval.

Candela (cd)

The international unit (SI) of luminous intensity. The term has been retained from the early days of lighting when a standard candle of a fixed size and composition was used as a basis for evaluating the intensity of other light sources.

Candlepower

Luminous intensity expressed in candelas. Plots of luminous intensity called candlepower distribution curves are used to indicate the intensity distribution characteristics of reflector type lamps.

[Mean Spherical] Candlepower

Initial mean spherical candlepower at the design voltage. Mean spherical candlepower is the generally accepted method of rating the total light output of miniature lamps. To convert this rating to lumens, multiply it by 12.57 (4 pi).

[Approximate] Center Beam Candlepower (CBCP)

For reflector type lamps. Center Beam Candlepower is the intensity (candelas) at the center or maximum intensity of the beam.

Case quantity or Standard Package Quantity

Number of product units packed in a master case. Also known as Standard Package Quantity.

Cathode Resistance

Resistance of the cathode in a Fluorescent lamp. It is measured "cold" before the lamp is turned on (Rc) or "hot" after the lamp is turned on (Rh). The ratio of the hot resistance to the cold resistance is also measured (Rh/Rc).

Chromaticity

Measure to identify the color of a light source, typically expressed as (x,y) coordinates on a chromaticity chart. See Color Temperature

Coefficient of Utilization

In general lighting calculations, the fraction of initial lamp lumens that reach the work plane. Cu is a function of luminaire intensity distribution, room surface reflectances and room shape.

Color Rendering Index (CRI)

An international system used to rate a lamp's ability to render object colors. The higher the CR (based upon a 0-100 scale), the better colors appear. CRI ratings of various lamps may be compared, but a numerical comparison is only valid if the lamps are also rated for the same chromaticity. (See Chromaticity). CRI differences among lamps are not usually significant (visible to the eye) unless the difference is more than three to five points.

[High] Color Rendering Indicator

Indicates that this is a lamp with high color rendering, which helps objects and persons illuminated to appear more true to life.

[Correlated] Color Temperature

Originally, a term used to describe the "whiteness" of incandescent lamp light. Color temperature is directly related to the physical temperature of the filament in incandescent lamps so the Kelvin (absolute) temperature scale is used to describe color temperature. For discharge lamps where no hot filament is involved, the term "correlated color temperature" is used to indicate that the light appears "as if" the discharge is operating at a given color temperature. Chromaticity is expressed either in Kelvins (K) or as "x" and "y" coordinates on the CIE standard Chromaticity Diagram. Although it may not seem sensible, a higher temperature color (K) describes a visually cooler, bluer light source. Typical color temperatures are 2800K (incandescent), 3000K (halogen), 4100K (cool white or SP41 Fluorescent), and 5000K (daylight-simulating fluorescent colors such as Chroma 50 and SPX 50).

Compact Fluorescent Lamp (CFL)

The general term applied to families of smaller diameter fluorescent lamps (e.g. the GE T4 and T5), some of which have built in ballasts and medium screw bases for easy replacement of incandescent lamps. Fluorescent bulbs use approximately 2/3 to 4/5 less electricity than regular incandescent bulbs with comparable lumen ratings and also last 20

times longer. They produce warm white tones that closely duplicate incandescent light.

[Max Current] Crest Factor

The ratio of the peak lamp current to average lamp operating current (RMS).

Current Type (AC/DC)

Whether the operational voltage is based on Alternating Current or Direct Current.

D

Depth of Lamp

Referenced by IEC as Dimension B.

Dimmable

Whether or not the lamp lumens can be varied while maintaining reliability.

Distance Between Legs

For U-shaped Fluorescent lamps, this measurement is the average distance between the inner walls of the legs.

Distance Outside Legs

For U-shaped Fluorescent lamps, this measurement is the average distance to the outside of each leg.

Distance Between Leg Centers

For U-shaped Fluorescent lamps, this measurement is the average distance between the centers of each leg.

DOT Type

The US Department of Transportation lamp number stamped in the glass lens or on the base of headlamps.

E

ECE R37 Code

European Common Market Regulation 37 standard lamp number.

[Maximum] Eccentricity

In High Intensity Discharge lamps the Bulb to Arc Angle is the angle off of center between electrodes and bulb. The Bulb to Base Angle is the angle off of center that the bulb is from the base.

Efficacy

See Luminous Efficacy.

Electromagnetic Spectrum

A continuum of electric and magnetic radiation that can be characterized by wavelength or frequency. Visible light encompasses a small part of the electromagnetic spectrum

in the region from about 380 nanometers (violet) to 770 nanometers (red) by wavelength.

Electronic Ballast

A short name for fluorescent high frequency electronic ballast. Electronic ballasts use solid state electronic components and typically operate fluorescent lamps at frequencies in the range of 25-35 kHz. The benefits are: increased lamp efficacy reduced ballast losses and lighter, smaller ballasts compared to electromagnetic ballasts. Electronic ballasts may also be used with HID lamps, but the circuits are quite different.

Elliptical Reflector (ER) Lamp

An incandescent lamp with an elliptically shaped reflector. This shape produces a focal point directly in front of the lamp which reduces light absorption in some types of luminaires. It is particularly effective at increasing efficiency of baffled downlights.

Energy Policy Act (EPACT)

Comprehensive energy legislation passed by the U.S. Congress in 1992. The lighting portion includes lamp labeling and minimum energy efficacy (lumens/watts) requirements for many commonly used incandescent and fluorescent lamp types. Similar legislation is being considered in other parts of the world. Please see classification on page 192.

EPACT Indicator

Means this lamp is Federally regulated for Energy Efficiency. See Energy Policy Act.

F

Federal Communication Commission

A U.S. Federal agency which is charged with regulating emissions in the radio frequency portion of the electromagnetic spectrum. For example, a regulation entitled, "Part 18" deals with electromagnetic interference (EMI) from all lighting devices operation at frequencies higher than 9 kilohertz (kHz). Typical electronically ballasted compact fluorescent lamps operate in the range of 24-100 kHz.

Field Angle

The angular dimension of the cone of light from reflectorized lamps (such as R and PAR types) encompassing the central part of the beam out to the angle where the intensity is 10% of maximum. See Beam Angle.

Glossary

Filament (design)

Filaments are designated by a letter combination in which C is a coiled wire filament, CC is a coiled wire that is itself wound into a larger coil, and SR is a straight ribbon filament. Numbers represent the type of filament-support arrangement.

Fixture required

Describes fixture requirements for HID lamps. O = Open or Enclosed Fixtures
E = Enclosed Fixtures Only
S = Lamps operated in a vertical position (Base Up or Down) $\pm 15^\circ$, can be used in an open fixture. Lamps burned in any other orientation must be used in "enclosed fixtures only". See additional details in the e-Catalog Help Menu under the HID category.

Fluorescent Lamp

A high efficiency lamp using an electric discharge through low pressure mercury vapor to produce ultra-violet (UV) energy. The UV excites phosphor materials applied as a thin layer on the inside of a glass tube which makes up the structure of the lamp. The phosphors transform the UV to invisible light.

Footcandle (fc)

A unit of illuminance or light falling onto a surface. One footcandle is equal to one lumen per square foot. See also Lux

[Nominal Operating] Frequency

The stated operating frequency in Hz of a discharge lamp.

G

Genura™

A GE fluorescent light source of a unique design. Features include a reflector shape, built in high frequency electronic ballast and an electrodeless arc tube. The 23-watt R25 Genura lamp is rated for 1100 initial lumens and 10,000 hours life and is designed to directly replace a 75-watt incandescent reflector lamp.

H

Halogen Lamp

A short name for the tungsten-halogen lamp. Halogen lamps are high pressure incandescent lamps containing halogen gases such as iodine or bromine, which allow the filaments to be operated at higher temperatures and higher efficacies. A higher temperature chemical reaction involving tungsten and the halogen gas recycles

evaporated particles of tungsten back onto the filament surface.

Halogen indicator*

Indicates if the bulb is a halogen lamp.

Halogen-IR(HIR)Lamp

GE designation for a new form of high-efficiency tungsten halogen lamp. HIR lamps use shaped filament tubes coated with numerous layers of materials, which selectively reflect and transmit infrared energy and light. Reflecting the infrared back onto the filament reduces the power needed to keep the filament hot.

Height of Lamp

Referenced by IEC as Dimension C. Also referred to as "Base Face to Top of Lamp".

High-Intensity Discharge (HID) Lamp

A general term for mercury, metal halide (GE Multi-Vapor, MXR or Arcstream) and high-pressure sodium (GE Lucalox) lamps. HID lamps contain compact arc tubes, which enclose various gases and metal salts operation at relatively high pressures and temperatures.

High-Pressure Sodium (HPS) Lamp

A generic name for GE's Lucalox lamp. HPS lamps are high intensity discharge light sources, which produce light by an electrical discharge through sodium vapor operating at relatively high pressures and temperatures.

Hot Restart Time

Time it takes for a High Intensity Discharge lamp to reach 90% of light output after going from on to off to on.

I

Illuminance

The "density" of light(lumens/area) incident on a surface. Illuminance is measured in footcandles or lux.

Incandescent Lamp

A light source which generates light using a thin filament wire (usually tungsten) heated to white heat by an electric current passing through it.

Infrared Radiation

Electromagnetic energy radiated in the wavelength range of about 770 to 1106 nanometers. Energy in this range cannot be seen by the human eye, but can be sensed as heat by the skin.

Instant Start

A type of fluorescent lamp-ballast circuit designed to start fluorescent lamps as soon as the power is applied. Originally, instant-start circuits were developed to eliminate separate mechanical starter devices. Slimline fluorescent lamps operate only on instant start circuits.

K

Kilowatt Hour (kwh)

The standard measure of electrical energy and the typical billing unit used by electrical utilities for electricity. A 100-watt lamp operated for 10 hours consumes 1000 watt-hours (100*10) or 1 kilowatt-hour. If the utility charges \$.10/kWh, then the electricity cost for the 10 hours of operation would then be 10 cents (1*\$.10).

L

Lamp

The term used to refer to the complete light source package including the inner parts as well as the outer bulb or tube. "Lamp," of course, is also commonly used to refer to the type of small light fixture such as a table lamp.

Lamp Description

The lamp's identification code. For Projection lamps, this is a 3-letter-number code uniquely identifying the lamp for ordering purposes. In some instances, lamps with 3-letter (ANSI) codes are offered in more than one design voltage, in which case the voltage required should also be specified when ordering. Some GE Projection Lamps have an ordering code comprising of two or more 3-letter ANSI codes - such as EM/EKS and DYS/DYV/BHC. The first code is the ANSI code, the secondary codes identify which lamp the multiple-coded lamp can directly replace. Only the first code appears on the lamp itself. Multiple-coded lamps are so-designated by General Electric for the convenience of the customer. In nearly all cases, Miniature and Sealed Beam lamps are marked with a General Electric Trade number recorded with ANSI.

LIF Code

For Stage & Studio lamps, these are assigned by the Lighting Federation of London U.K. They ensure electrical and mechanical interchangeability of similarly coded lamps. LIF codes are divided into groups according to the primary application of the lamps.

Light

Radiant energy which can be sensed or seen by the human eye. Visible light is measured in lumens.

[Average Rated] Life

The median time it takes for a lamp to burn out. For example, a 60-watt Soft White Bulb can be expected, on average, to burn for 1,000 hours. Based upon continuous testing of lamps in laboratories, the 1,000 hour rating is the point in time when 50% of the test samples have burned out and 50% are still burning. Unless otherwise noted Fluorescent and CFL life assumes 3 hours average operating time per start. Unless otherwise noted HID life assumes 10 hours average operating time per start

Light Center Length (L.C.L)

The distance between the center of the filament or arc tube in a lamp and a reference plane-usually the bottom of the lamp base. See L.C.L Reference Plane location below.

Lumen

The international (SI) unit of luminous flux or quantity of light. For example, a dinner candle provides about 12 lumens. A 60-Watt Soft White incandescent lamp provides 840 lumens.

[Approximate Initial] Lumens

Initial light output. For Projection lamps, the value shown is based on spherical photometry, at rated voltage, of lamps that have been seasoned for approximately 15% (or minimum of 2 hours) or more of their rated average life.

[Mean] Lumens

Lamp light output (lumens) at 40% of rated lamp life for Fluorescent, Compact Fluorescent and Metal Halide lamps and 50% of rated life for Mercury and HPS lamps.

Lumen Maintenance

A measure of how well a lamp maintains its lamp output as it ages. Lumen maintenance is usually provided as a curve. See also Mean Lumens.

Lumen Per Watt (lpw)

A measure of the efficiency, or, more properly, "efficacy" of a light source. Efficacy is easily calculated by taking the lumen output of a lamp and dividing by the lamp watts. For example, a 100-watt

producing 1750 lumens has an efficacy of 17.5 lumens per watt.

Luminaire

A complete lighting unit consisting of a lamp (or lamps), ballast (or ballasts) as required together with the parts designed to distribute the light, position and protect the lamp and connect them to the power supply.

Luminance

Formerly, a measure of photometric brightness. Luminance has a rather complicated mathematical definition involving the intensity and direction of light. It should be expressed in candelas per square inch or candelas per square meter although an older unit, the "footcandle," is still sometimes used. Luminance is a measurable quantity where as brightness is a subjective sensation.

Luminous Efficacy

The light output of a light source divided by the total power input to that source. It is expressed in lumens per watt.

Lux (lx)

The SI (International) unit of illuminance. One lux is equal to one lumen per square meter. See also Footcandle.

M

Maximum Overall Length (M.O.L.) or Nominal Length

The end-to-end measurement of a lamp expressed in inches or millimeters. Since the listed lengths include maximum tolerances, actual lamps are generally slightly shorter. The length of Linear Fluorescent lamps can also be stated from Base Face to Base Face.

Mean Lumens

The average light output of a lamp over its rated life. For fluorescent and metal halide lamps, mean lumen ratings are measured at 40% of rated lamp life. For mercury, high-pressure sodium and incandescent lamps, mean lumen ratings are measured at 50% of rated lamp life.

Mercury Lamp

A high-intensity discharge light source in which the light is produced by the radiation from mercury, plus halides of metals such as sodium, scandium, indium and dysprosium. Some lamp types

may also use phosphor coatings. GE trade names of these lamps include: Multi-Vapor, XL, Watt-Miser®, Chromafit and Arcstream.

Nanometer

A unit of wavelength equal to 10⁻⁹ meters.

[Gov't] National Stock Number

The standardized part number used by the US Government for procurement.

O

OCV

Open Circuit Voltage measured across the lamp. Measured in a variety of ways.

Operating Position or Burn Position

Mercury and High Pressure Sodium lamps may be operated in any burn position and will still maintain their rated performance specifications. Metal Halide and Low Pressure Sodium lamps, however, are optimized for performance in specific burn positions, or may be restricted to certain burn positions for safety reasons.

U = Universal burning position

HBU = Horizontal -15° to Base Up

HBD = Horizontal +15° to Base Down

HOR = Horizontal ±15°

H45 = Horizontal to -45° only

VBU = Vertical Base Up ±15°

VBD = Vertical Base Down ±15°

If no special burn position is noted, the burn position is universal.

P

PAR Lamp

PAR is an acronym for a parabolic aluminum reflector. A PAR lamp, which may use either an incandescent filament, a halogen filament tube or HID arc tube is a precision pressed-glass reflector lamp. PAR lamps rely on both the internal reflector and prisms in the lens for the control of the light beam.

Phosphor

An inorganic chemical compound processed into a powder and deposited on the inner glass surface of fluorescent tubes and some mercury and metal-halide lamp bulbs. Phosphors are designed to absorb short wavelength ultraviolet radiation and to transform and emit it as visible light.

Glossary

Power Factor (PF)

A measure of the phase difference between voltage and current on alternating current circuits. Power factors can range from 0 to 1.0 with 1.0 being ideal. Power factor is sometimes expressed as a percent. A high power factor means that an electrical system or device is utilizing power efficiently. Incandescent lamps always have power factors close to 1.0 because they are simple "resistive" loads. The power factor of a discharge lamp system is determined by the ballast used. "High" power factor usually means a rating of 0.9 or greater. The power factor of "core and coil" electromagnetic ballasts may be as low as 0.5-0.6.

Precise™

The GE trade name for the compact MR-16 and MR-11 low-voltage halogen dichroic "cool beam" reflectorized spot and flood lamps.

Product Code

It is important to use this five-digit code when ordering to ensure that you receive the exact product you require.

Preheat Circuit

A type of fluorescent lamp-ballast circuit used with the first commercial fluorescent lamp products. A push button or automatic switch is used to preheat the lamp cathodes to a glow state. Starting the lamp can then be accomplished using simple "choke" or reactor ballasts.

Q

Quartzline

A GE registered trademark term for some types of tungsten-halogen lamps.

R

Rapid Start Circuit

A fluorescent lamp-ballast circuit which uses continuous cathode heating, while the system is energized, to start and maintain lamp light output at efficient levels. Rapid start ballasts may be either electromagnetic, electronic or of hybrid designs. Full-range fluorescent lamp dimming is only possible with rapid start systems.

Reflector Lamp

An incandescent, compact fluorescent or HID lamp with a built in reflecting surface. Incandescent and HID versions are made from a single piece of blow-molded soft or

hard glass. CFL versions may be one piece or may be designed so that the inner lamp can be replaced.

S

SCC Code

The full 14 digit case code used on GE's content label.

[Max] Seal Temperature

The maximum operating temperature of the seal of the lamp in Celcius.

Series Resistance

In order to properly control the lamp current, a ballast resistor must be used. Lamps having screw bases have the necessary resistor built-in. Those having bayonet bases and those listed with wire terminals do not have a built-in resistor.

Source Size

For Projection lamps, this is defined as the dimensions of the rectangular area, centered on the lamp axis, within which all luminous parts of the filament lie, when viewed perpendicular to the axis of the filament coil or to the plane of C-13 and C-13D filaments.

Specification Series (SP) Colors

Energy-efficient, all-purpose tri-phosphor fluorescent lamp colors that provide good color rendering (as measured by the Color Rendering Index or CRI). The CRI for SP colors is 70 or above and varies by specific lamp type. Available chromaticities (or "tones") within the SP group include: SP30 (3000K) - a good match for the old standard "warm white" color and incandescent or halogen incandescent lamps. SP35 (3500K) - neutral all-purpose tone. SP41 (4100K)- cool in appearance and designed to match to old standard "cool white" color. SP50 - still cooler much like the combination of sun-sky-clouds. SP65 - A color with a very cool appearance, much like north skylight, and designed to match the appearance of the old "daylight" color. SP fluorescent colors are available in most of the widely used linear lamp types including the T8, T12, slimline, U-tube, high output and 1500 mA types.

Specification Series Deluxe (SPX) Colors

Energy-efficient, tri-phosphor fluorescent lamp colors that provide better color rendering (as measured by the CRI) than Specification Series

colors. The CRI or SPX colors is 80 or higher and varies by specific lamp type. Available chromaticities within the SPX include: SPX27 (2700K) - A visually "warm" tone intended to match the visual appearance of low wattage incandescent lamps. SPX30 (3000K) - A good match with high wattage incandescent and halogen incandescent lamps. SPX35 (3500K) - A widely used, neutral all-purpose tone. SPX41 (4100K) - Cool in appearance. SPX 50 (5000K) - a daylight simulating color with a very cool appearance much like skylight. SPX fluorescent colors are available in most of the widely-used lamp types including T8, T12, and U-Tube and high lumen Biax® types. GE compact fluorescent lamps (CFL's) typically use only SPX colors.

Spectral Power Distribution (SPD)

A graph of the radiant power emitted by a light source as a function of wavelength. SPD's provide a visual provide or "finger print" of the color characteristics of the source throughout the visible part of the spectrum.

[Minimum] Starting Temperature

The minimum ambient temperature at which the lamp will start reliably.

[Maximum] Starting Time

The time in seconds for the lamp to reach 90% of light output after being switched on.

T

TCLP Test

The Toxicity Characteristics Leaching Procedure (TCLP) test specified in the Resource Conservation and Recovery Act (RCRA) of 1990, is used to characterize fluorescent lamp waste as hazardous on non-hazardous waste. The TCLP test measures the ability of the mercury in a lamp to leach from a landfill into ground water under very aggressive and reactive conditions.

[Minimum or Maximum] Terminal to Terminal Starting Lamp Voltage (Vrms)

The minimum or maximum allowed voltage allowed into lamp from ballast under varying conditions as specified.

Total Harmonic Distortion (THD)

A measure (in percent) of power quality. THD indicates the distortion of the alternating current wave form. Low values (<20%) are preferred.

U

UCC

The 12 digit case code derived from the last 12 digits of the 14 digit SCC code on GE's case content label.

Underwriters Laboratories (UL)

A private organization which tests and lists electrical (and other) equipment for electrical and fire safety according to recognized UL and other standards. A UL listing is not an indication of overall performance. Lamps are not UL listed except for compact fluorescent lamp assemblies - those with screw bases and built-in ballasts

Ultraviolet (UV) Radiation

Radiant energy in the range of about 100-380 nanometers (nm). For practical applications, the UV band is broken down further as follows:

Ozone Producing: 180-220nm

Bactericidal (germicidal): 220-300 nm

Erythema (skin reddening): 280-320 nm

"Black" light: 320-400 nm

The International Commission on Illumination (CIE) defines the UV bands as UV-A (315-400nm); UV-B (280 - 315 nm) and UV-C (100-280). "%UV_ Reduction" is the percentage of the particular band of UV light that is reduced.

UPC

The 12 digit code on the saleable unit that is used for scanning at the register.

[Design] Voltage

A measurement of the electromotive force in an electrical circuit or device expressed in volts. Voltage can be thought of as being analogous to the pressure in waterline. For Automotive lamps, voltage at which the lamp is designed to provide the amperes, candlepower, and laboratory life characteristics. For Projection lamps, the voltage shown is the design voltage of the lamp, on which the life and wattage ratings are based. Lamps for which 115-120 is shown in the Volts column are designed at 118 volts. Lamps are available only in the design voltage(s) shown. When ordering lamps listed for more than one voltage, be sure to specify the voltage required. (Supply voltage variation can significantly affect lamp life.)

W

[Max Bulb] Wall Temperature

The maximum operating bulb wall temperature in Celcius.

Warm Up Time to 90%

The time it takes for a High Intensity Discharge lamp to reach 90% of light output after being turned on.

Watt

A unit of electrical power. Lamps are rated in watts to indicate their power consumption. Power consumed over time equals the electrical energy used.

Watt-Miser®

A Watt-Miser® lamp is a term used by GE to indicate a reduced-wattage lamp with performance characteristics (life, light output, etc.) such that it can usually directly replace a higher-wattage product. Watt-Miser® lamps are available in a wide range of incandescent, fluorescent and HID lamp types.

[Reduced] Wattage indicator

Indicates that this is a reduced wattage option for lamps normally used in this application. Be sure to check wattage, lumens and life to determine which lamp is best suited to your needs.

Width of Lamp

Referenced by IEC as Dimension A.

[Typical] Working Distance

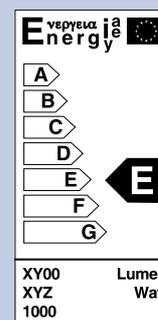

For Multi-Mirror® and other reflector Quartzline® lamps and MARC™ Projection lamps, the Working Distance shown is the distance from the front surface of the reflector rim to the film plane, in the optical system for which the lamp was first designed. In most cases, it provides a uniform plane of light for the intended aperture.

Energy efficiency classification

The European Union published a Commission Directive in January 1998 regarding the efficiency labelling of household lamps (98/11/EC) effective 1 July 1999. However a transition period is allowed for lamps displaying the label at retail outlets until 1 January 2001. The directive requires that all household lamps that are supplied directly from the mains have a label on the product/packaging that indicates the energy efficiency class of lamp (lm/W). Lamps which have a luminous flux of greater than 6,500 lumens are excluded from the labelling requirement. Reflector lamps and those with an input power of less than 4 watts are also excluded. The classification scheme grades lamps into 7 classes, from **A** to **G**, with class **A** having the highest efficiency.

The scheme classifies lamps as follows:

- A** Triphosphor fluorescent lamps, both linear and pin compact fluorescent. Integral compact fluorescent with electronic ballast
- B** Halophosphate linear fluorescent. Some pin compact fluorescent. Integral compact fluorescent with magnetic ballast
- C** High efficiency halogen lamps
- D** Other halogen lamps
- E/F** Standard incandescent lamps
- G** Decorative incandescent and others

We hope that this Spectrum catalogue has helped you to identify the right lamps to meet your particular lighting needs. We have made every effort to make it easy to use, to include accurate, up-dated product data and to provide useful information about lamp technologies and lighting applications. We take pride in our reputation for quality customer service and if there is any further information you need, please don't hesitate to contact your nearest GE Lighting sales office.

Notes

GE Consumer & Industrial Lighting

GE Lighting – a division of GE Consumer & Industrial– is one of the largest suppliers of light sources in the world, providing state-of-the-art technology, ranging from incandescent to speciality products. Providing solutions for commercial, industrial and residential use in more than 100 countries, GE Consumer & Industrial uses innovative technologies and "ecomagination," a GE initiative to aggressively bring to market new technologies that help customers and consumers meet pressing environmental challenges, to deliver comfort, convenience and electrical protection and control. General Electric (NYSE: GE) brings imagination to work, selling products under the , Enrich™, Biax™, ConstantColor™, Lucalox™, Starcoat™ and LongLast™ brands.

GE Lighting is constantly developing and improving its products. For this reason, all product descriptions in this brochure are intended as a general guide, and we may change some specifications from time to time in the interests of product improvement.

General conditions of sale GE Lighting products are supplied

according to the Company's General Conditions of Sale. If you require a copy of these conditions please contact your nearest GE Lighting sales office.

Prices

A price list is available from all GE Lighting sales offices.
