

Quartz & Special Glass

PHILIPS

Special Glass

We are a world leader in development and manufacturing of special glass. Depending on your application we have the appropriate glass-type.

Our glass-types are produced according to the highest standards to lighten your business.

Our standard glass-types are used for;

- Germicidal UV-C lamps and sleeves (PH160),
- Black light blue lamps (PH175),
- Automotive lamps,
- Medical photo therapy lamps (PH319),
- Sodium discharge lamps (PH910 2-ply),
- Sensors for chemical industry,
- Image intensifiers,
- Cathode ray tubes,
- Solar energy.

Pellets & Cullet

We develop and manufacture pellets for glass production. Our pellets are the best available raw materials for glass manufacturing. Each pellet has the right composition for glass melting.

Benefits of using our pellets:

- Superior homogeneity and very low dust emission.
- Pellets are ready to use.
- Long time without quality loss.
- Pellets are available for clear & colour glass-types.

We supply pellets for optimal combination with all colour rods, bars and fritte available on the market.

Using our pellets you will have the convenient feeling of using the best possible batch and our technical support for optimising your production.

Quartz

Philips quartz is developed and manufactured in Winschoten. Our quartz is available U- transmittance or UV-blocked as tubing and rods. We produce our quartz according to the highest standards to lighten your business.

Our quartz is used for;

- Halogen lamps (UV-open or block, tubes and rods),
- High Intensity Discharge lamps (e.g. Xenon),
- Germicidal UV-C medium and high pressure lamps,
- UV transparent sleeves,
- Thermocouples.
- Semiconductor equipment
- Optical Fibers
